

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

~~~~~  
By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 133.] **Marriages**—*October, November, December, 1881.* [Price 9d.
Births and Deaths—*January, February, March, 1882.*

*General Register Office, Somerset House,
1st May, 1882.*

The resident POPULATION of the UNITED KINGDOM in the middle of 1882 is estimated at 35,280,299 persons; that of England and Wales at 26,406,820, of Scotland at 3,785,400, and of Ireland at 5,088,079.

In the United Kingdom the *births* of 287,690 children, and the *deaths* of 183,468 persons, were registered in the three months ending 31st March 1882. The recorded natural increase of population was thus 104,222. The registered number of persons married in the quarter ending 31st December 1881 was 145,022.

The birth-rate in the United Kingdom in the first quarter of 1882 was 33·1 per 1000, and the death-rate 21·1. The marriage-rate in the fourth quarter of 1881 was 16·5 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2169 registration sub-districts of England and Wales during the quarter ending 31st March 1882; and the MARRIAGES in 14,569 churches or chapels, in 8827 registered places of worship unconnected with the Established Church, and in 630 Superintendent Registrars' Offices, in the three months ending 31st December 1881.

Marriages.

During the last three months of 1881 the marriages of 120,408 persons were registered in England and Wales; these were equal to an annual rate of 18·3 per 1000 of the estimated population in the middle of that year. This marriage-rate, although 0·7 below the mean rate in the corresponding quarters of the ten years 1871–80, showed a further increase upon the low rates 17·0 and 17·6 that prevailed in the last quarters of 1879 and 1880. The annual marriage-rate in the last three months of 1881 ranged in the several English counties from 12·5 and 12·7 in Shropshire and Herefordshire, to 22·1 in Nottinghamshire and 22·5 in Norfolk. Compared with recent corresponding quarters the marriage-rate in the last quarter of 1881 showed the largest proportional recovery in the mining districts of Monmouthshire, Durham, and the North Riding of Yorkshire.

The marriage-rate in England and Wales during the year 1881 was equal to 15·1 per 1000, and showed a further slight recovery from the low rates, 14·4 and 14·9, that prevailed in 1879 and 1880; it was, however, 1·0 below the mean annual rate during the ten years 1871-80. The marriage-rate declined steadily from 17·6 in 1873 to 14·4 in 1879, which was the lowest rate on record. Since 1879 the recovery in the marriage-rate has been slow but continuous.

Births.

The births registered in England and Wales during the three months ending March last were 223,802, and were 1986 fewer than in the corresponding quarter of last year. The annual birth-rate was equal to 34·4 per 1000 of the estimated population, and was 2·0 below the average rate in the ten preceding corresponding quarters; it was lower than in the first quarter of any year since 1850, when a larger number of births escaped registration than is now the case. The birth-rate last quarter did not exceed 27·3 in Huntingdonshire and 28·4 in Herefordshire, whereas it ranged upwards in the other counties to 38·2 in Durham and 38·6 in Nottinghamshire.

In twenty-eight of the largest English towns the birth-rate last quarter averaged 36·7 per 1000; it was equal to 36·2 in London and averaged 37·1 in the twenty-seven provincial towns. The rates in these provincial towns ranged from 28·3 and 31·8 in Halifax and Huddersfield, to 41·2 in Cardiff, 41·5 in Preston, and 41·8 in Sunderland. In fifty other large town districts the rate averaged 35·8; the lowest rates in these districts were 25·7 in Bath and 27·7 in Southport, and the highest were 43·1 in St. Helens and 43·4 in Warrington.

Movement of the Population.

The *natural* increase to the population of England and Wales, or the excess of births over deaths, which had been 75,912 and 87,206 in the March quarters of 1880 and 1881, was 83,478 in the first three months of this year. It appears from returns issued by the Board of Trade that 64,223 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. This number very considerably exceeded that recorded in the corresponding quarter of any of the twelve preceding years; the nearest approach to it was 45,151 in 1880. Excluding 22,001 foreigners, and distributing 661 whose nationality was undistinguished, the emigrants of British origin were 42,155, of whom 25,439 were English, 5,557 Scotch, and 11,159 Irish; in the two preceding corresponding quarters the numbers of British emigrants were 33,767 and 28,788, respectively. The proportions of emigrants last quarter to a million of the population were respectively 963 from England, 1,468 from Scotland, and 2,193 from Ireland. Compared with the first three months of 1881, the proportion of emigration showed a large increase in each portion of the United Kingdom; this increase was highest in Scotland.

Prices and Pauperism.

The average price of wheat during the three months ending March last was 45s. 5d., and within 5d. of the average price in the preceding three months; it was, however, 3s. 2d. above the mean price in the first quarter of 1881. The mean wholesale price of beef and of mutton during last quarter was 6d. and 7½d., respectively; the mean price of beef corresponded with, while that of mutton was ½d. above, the mean prices prevailing in the preceding quarter. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 15s. per ton, against 14s. 10d. and 16s. in the two preceding corresponding quarters. The mean price of Consols was 100l. 7s. 6d., showing an increase upon the mean prices in the last two quarters of 1881. The minimum annual rate of discount charged at the Bank of England was raised to 6l. on

30th January, since which it has been successively reduced to 5*l.* on 23rd February 4*l.* on 9th March, and 3*l.* on 23rd March.

The average number of paupers (exclusive of lunatics in asylums, and vagrants) relieved in England and Wales on the last day of each week in the quarter was 742,722, of whom 187,200 received in-door and 560,522 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending March last was equal to 28·3 per 1000, against 30·3 and 30·0 in the two preceding corresponding quarters; in the first or winter quarter of 1870, the proportion of paupers was 47·0 per 1000. Compared with the first quarters of 1880 and 1881, pauperism last quarter showed a further decline of 5·7 per cent. During last quarter 25·0 per cent. of the total paupers were in receipt of in-door relief, whereas in the corresponding period of 1871 the proportion of in-door to total paupers did not exceed 15·5 per cent.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at other stations of observation, furnished by Mr. James Glaisher, F.R.S., will be found on pages 65-72, with accompanying Tables. The mean reading of the barometer during the quarter was 30·03 inches, and was more than the quarter of an inch above the mean reading for the corresponding period in forty years; the mean exceeded the average in each month of the quarter, and the excess in January was little short of half an inch. Excepting only two moderately cold periods, from 17th to 26th January, and the first ten days in February, the weather was unseasonably mild throughout the quarter. The mean daily excess of temperature during the first 16 days of January was 6·6; and during the warm period of 49 days from 11th February till the end of March, the average daily excess was 5·3. The mean temperature of the air in the quarter was 42°·7, and exceeded by 4°·0 the average for the corresponding period in 111 years. The mean daily excess of temperature was equal to 3°·9 in January, 3°·1 in February, and 4°·9 in March. During the 111 years 1771-1881 the mean temperature of January has been only 18 times, of February 23 times, and of March only 4 times, so high as the means recorded in the first quarter of this year. Only 4 times in the same period of 111 years has the mean temperature of the quarter been so high as that of the first three months of this year. At 42 stations of observation the mean temperature ranged from 40°8 both at Wolverhampton and Holkham (Norfolk), to 45°·9 and 46°·0 at Barnstaple and Truro.

The amount of rain measured at Greenwich during the quarter was 3·63 ins., and was nearly an inch and a half below the average amount in the corresponding periods of 66 years. The recorded amount showed a deficiency of about half an inch in each of the three months of the quarter. Rain was measured at Greenwich on 10 days in January, 8 in February, and 11 in March; in all, on 29 of the 90 days of the quarter. At 42 stations of observation the recorded rainfall of the quarter ranged from 2·96 ins. at Bournemouth, to 12·13 ins. and 12·83 ins., respectively, at Cockermouth and Stonyhurst.

The number of hours of bright sunshine recorded at Greenwich during the quarter was 179·7, against 172·0, the average amount recorded in the corresponding quarters of the four years 1878-81.

State of the Public Health; Deaths.

During last quarter 140,324 deaths were registered in England and Wales. These deaths were equal to an annual rate of 21·6 per 1000 of the estimated population in the middle of this year, which corresponded with the low rate that prevailed in the corresponding quarter of last year, and was 1·8 below the average rate in the first quarters of the ten years 1872-81. No lower death-rate has been recorded in the first quarter of any year since civil registration was established in 1837, a result in great measure due to the exceptional mildness of the past winter. Exclusive of London and its outer ring of suburban districts, in which

the rate of mortality was exceptionally raised by the fatal effects of dense fogs in the early part of the quarter and by the epidemic prevalence of whooping-cough, the general death-rate in England and Wales was considerably lower last quarter than in the first three months of last year. The rate in the several English counties last quarter ranged from 16·0 and 16·1 in Huntingdonshire and Westmorland, to 24·1 and 24·5 in Lancashire and Monmouthshire. Compared with those in the first quarter of 1881, the death-rate last quarter in Monmouthshire showed a marked increase, whereas it had considerably declined in Lancashire.

The 140,324 deaths in England and Wales last quarter included 71,871 of males and 68,453 of females; the annual death-rate among males was 22·7, and among females 20·5 per 1000 estimated to be living of each sex. In equal numbers living, the deaths were 111 of males to 100 of females: this proportion corresponded with that which prevailed in the first quarter of last year.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table V.) and containing an estimated population of fifteen and a half millions of persons, the death-rate was equal to 23·2 per 1000; in the remaining and chiefly rural population of about ten and a half millions, the rate did not exceed 19·1. These urban and rural rates were respectively 1·7 and 2·4 below the average rates in the ten preceding corresponding quarters. In equal numbers living, the deaths were 121 in the urban to 100 in the rural population; in the first quarters of the ten years 1872 to 1881 the average proportion was 116 to 100.

In twenty-eight of the largest English towns, including London, and having an estimated population of nearly eight and a half millions of persons, the death-rate was equal to 24·7 per 1000, and was 1·5 above the general urban rate. The death-rate in London was equal to 25·6, whereas the average rate in the twenty-seven provincial towns did not exceed 23·9. The lowest rates among the provincial towns were 19·3 and 20·0 in Leicester and Halifax; whereas the rates in the other towns ranged upwards to 28·7 in Preston, 28·9 in Blackburn, and 29·2 in Brighton. In fifty other English and Welsh town districts, with an aggregate population estimated at rather more than two and a half millions of persons, the death-rate averaged only 22·0, and was 2·7 below the mean rate in the twenty-eight larger towns. Among these fifty towns the lowest death-rates were 15·6 in Southport, 16·3 in Dover, 16·6 in Darlington, 17·3 in Gloucester, and 17·5 in Burton-upon-Trent; while the highest rates were 25·7 in Wigan, 25·9 in Ystradyfodwg, 26·0 in West Bromwich, 28·9 in Merthyr Tydfil, and 31·1 in St. Helens. The excess in the death-rates in the four last-mentioned towns was mainly due to exceptional mortality from zymotic diseases.

MORTALITY AT DIFFERENT AGES.—The 140,324 deaths last quarter included 32,600 of infants under one year of age, 71,262 of children and adults aged between one and 60 years, and 36,462 of persons aged upwards of 60 years.

The rate of infant mortality, measured by the proportion of deaths under one year to births registered, was equal to 146 per 1000; in the ten preceding corresponding quarters the proportion of infant mortality averaged 148 per 1000, and ranged from 167 in 1875, to 134 in 1881. The lowest county rates of infant mortality during last quarter were 94 in Westmorland and 112 in Berkshire, while the highest were 165 in Monmouthshire, 167 in Rutlandshire, and 174 in Bedfordshire. In the twenty-eight large towns the proportion of infant mortality averaged 157 per 1000, and exceeded the general English rate by 11. This proportion was equal to 158 in London, and averaged 156 in the twenty-seven provincial towns, among which it ranged from 112 and 116 in Hull and Cardiff, to 182 in Bolton, 188 in Huddersfield, 194 in Oldham, 208 in Preston, and 222 in Blackburn. In the fifty other town districts infant mortality averaged 156, and was scarcely lower than in the twenty-eight larger towns; while the proportion was so low as 89 in Dover, 91 in Southport, and 93 in Tynemouth, it ranged upwards to 206 in West Bromwich, 208 in Wigan, 210 in Exeter, and 216 in Ystradyfodwg.

The annual rate of mortality in England and Wales among persons aged between one and 60 years was equal to 12·2 per 1000 persons estimated to be living at these ages, against an average of 13·0 in the ten preceding corresponding quarters. In the twenty-eight large towns the death-rate at these ages averaged 15·2 per 1000, and ranged from 9·6 and 11·0 in Leicester and Halifax, to 18·2 in Manchester, 18·4 in Liverpool, and 18·8 in Brighton.

Among persons aged upwards of 60 years the annual death-rate averaged 74·9 per 1000 in England and Wales, and was 11·9 below the mean rate at these ages in the ten preceding first or winter quarters of 1872-81; this death-rate among elderly persons was lower than that recorded in the first quarter of any of the twelve years 1870-1881, the nearest approach to it being 75·4 in the mild first quarter of 1872. The death-rate at these ages in the twenty-eight towns averaged 86·1 per 1000 last quarter, and was 11·2 above the general rate. In London under the influence of the fogs the death-rate of persons aged over 60 years was equal to 91·8, while in the twenty-seven provincial towns it did not average more than 80·6, and ranged from 65·2 and 67·1 in Nottingham and Hull, to 93·8 and 100·4 in Halifax and Wolverhampton.

The rate of mortality at all ages last quarter, owing in great measure to the exceptional mildness of the winter, was nearly 8 per cent. below the average rate in the ten preceding corresponding quarters; the decline was equal to one per cent. among infants under one year of age, to 6 per cent. among children and adults aged between one and 60 years, and to nearly 14 per cent. among persons aged upwards of 60 years.

ZYMOTIC DISEASES.—The 140,324 deaths from all causes included—

4973	attributed to	whooping-cough.
3524	„	measles.
3443	„	scarlet fever.
1813	„	fever.
1677	„	diarrhœa.
1048	„	diphtheria.
533	„	small-pox.

Thus the total number of deaths attributed to these causes was 17,011, corresponding to an annual rate of 2·61 per 1000, against an average rate of 2·75 in the ten preceding first quarters.

The lowest county rates from these causes were 0·85 in Huntingdonshire, 1·01 in Westmorland, and 1·08 in Dorsetshire; while the highest were 3·56 in Lancashire, 3·82 in Nottinghamshire, and 4·17 in Monmouthshire. In the twenty-eight great towns (Table VI.), this zymotic rate averaged 3·76, varying from 1·34 in Halifax and 1·64 in Sheffield, to 5·29 in Nottingham, 7·13 in Blackburn, and 8·17 in Brighton. In fifty other large town districts (Table VII.) the rate averaged 2·86, but ranged upwards to 7·11 in Ystradyfodwg, 9·02 in Barrow-in-Furness, and 12·27 in St. Helens.

The deaths from *whooping-cough* numbered 4,973, corresponding to an annual rate of 0·76 per 1000, against an average rate of 0·63 in the ten preceding first quarters. The mortality from this disease was, therefore, considerably above the average. The lowest county rates from this disease were 0·00 in Westmorland, 0·07 in Herefordshire, and 0·09 in Cornwall, while the highest were 0·89 in Middlesex (extra-metrop.), 1·11 in Sussex, and 1·12 in Essex. In the twenty-eight great towns the rate was 1·47, ranging from 0·05 in Halifax and 0·08 in Blackburn, to 2·29 in London, and 2·89 in Brighton. In fifty other large town districts the rate was 0·51, varying upwards, however, to 1·92 in Middlesbrough, 2·04 in Ystradyfodwg, and 2·13 in Wigan. The mortality was also excessive in the sub-districts of Wenhaston and of Chesham, where the rates reached respectively 3·3 and 7·6.

The deaths ascribed to *measles* were 3524, corresponding to an annual rate of 0·54 per 1000, against an average of 0·38 for the ten preceding first quarters. The mortality from this disease was therefore considerably in excess of the average.

The rate was as low as 0·01 in the North Riding, 0·02 in South Wales, 0·03 in Cumberland, and 0·05 in Shropshire, while it was as high as 0·95 in Worcestershire, 1·00 in Norfolk, and 1·33 in Lancashire. In the twenty-eight great towns the rate was 0·85, ranging from 0·05 in Birkenhead, 0·10 in Hull, and 0·11 in Newcastle, to 3·04 in Brighton and Preston, 3·57 in Norwich, and 5·01 in Blackburn. In fifty other large town districts the rate was 0·83, ranging upwards to 2·92 in Rotherham, 3·21 in Cheltenham, 3·52 in Warrington, and no less than 9·5 in St. Helens. In the following sub-districts the rate was excessively high, in every case being higher than 5·0; Malmesbury West, East Stonehouse, Antony, Bromsgrove, Middlewich, Farnworth, Dalton, Morley, Goole, Llanrwst.

The deaths from *scarlet fever* were 3443, corresponding to an annual rate of 0·53 per 1000, against an average of 0·66 for the ten preceding first quarters.

The county rates varied from 0·00 in Rutlandshire, 0·04 in Cornwall, 0·08 in Huntingdonshire, and 0·09 in Surrey and in Hampshire, to 1·81 in Nottinghamshire, 1·94 in Monmouthshire, and 2·49 in the East Riding. In the twenty-eight great towns the rate was 0·56, ranging from 0·05 in Plymouth and 0·06 in Portsmouth, to 2·36 in Nottingham, and 3·54 in Hull. In fifty other large town districts the rate was 0·67; but in Ystradyfodwg it was 4·66 and in Merthyr Tydfil was 4·86. In the following sub-districts also the mortality was excessive, the rate in no case being under 5·0; Leverington, Upwell, Gayton, Fincham, Barnstaple, Claborough, Ratcliffe-on-Trent, Barmborough, Hessle, Brandsburton, Aberystroth, Tredegar, Gelligaer.

The deaths ascribed to *fever* (including typhus, enteric fever, simple and ill-defined forms of continued fever), numbered 1813, giving an annual rate of 0·28 per 1000, against an average rate of 0·44 for the ten preceding first quarters.

The rate was 0·07 in Wiltshire and 0·09 in Surrey (extra-met.), but in South Wales was 0·42 and in Lancashire 0·46. In the twenty-eight great towns the rate was 0·33, ranging from 0·05 in Wolverhampton and 0·09 in Norwich, to 0·68 in Blackburn and 0·83 in Liverpool. In fifty others large town districts the rate was 0·33, or exactly the same as in the twenty-eight great towns, but in St. Helens was 0·90 and in Barrow-in-Furness was 1·30. The mortality was also excessive in Higham Ferrers and Hanley sub-districts.

The deaths from *diarrhæa* were 1677, corresponding to an annual rate of 0·26 per 1000, against an average of 0·29 for the ten preceding first quarters.

The rate varied from 0·10 in Hampshire and Bedfordshire to 0·42 in Lancashire and 0·51 in Staffordshire. In the twenty-eight great towns the rate was 0·24, lower therefore than in all England and Wales, but in Preston it was 0·71, in Wolverhampton 0·79, and in Blackburn 0·98. In fifty other large town districts the rate was 0·34, ranging upwards to 1·0 in Bury and 1·2 in Exeter.

The deaths ascribed to *diphtheria* were 1048, corresponding to an annual rate of 0·16 per 1000, against an average of 0·12 for the ten preceding first quarters. The mortality was therefore above the average.

The rate in Dorsetshire was 0·02, in Wiltshire and Suffolk 0·03, in Gloucestershire and the East Riding 0·04, whereas it was 0·41 in Monmouthshire and 0·73 in Hampshire. In the twenty-eight great towns the rate was 0·18; but, while no death from this cause was registered in either Wolverhampton or Birkenhead, the rate was no less than 2·19 in Portsmouth, where 71 deaths were referred to it. In fifty other large town districts the rate was 0·09. The mortality was in excess in the following sub-districts: Much Wenlock, Whitchurch (Hants), Grampound, Taunton St. Mary, and Folkestone. In the last-mentioned sub-district the deaths were 32, and the rate 5·5.

The deaths from *small-pox* were 533, corresponding to an annual rate of 0·08 per 1000, against an average of 0·23 for the ten preceding first quarters.

Of the 533 deaths, 212 occurred in registration London, and 50 in the Outer Ring, leaving 271 for the rest of England and Wales. It may be noticed in the accompanying Table that while small-pox has been gradually declining in London and its immediate neighbourhood for the four past quarters, it has been simul-

taneously increasing in the rest of England and Wales; though even now the mortality from this disease is more than four times as high in Greater London than in the rest of the country.

Quarter ending	Greater London.	Rest of England and Wales.	Annual Rate per 1000.	
			Greater London.	Rest of England and Wales.
June - - 1881	1,107	106	0·93	0·02
September - „	522	152	0·44	0·03
December - „	307	164	0·26	0·03
March - 1882	262	271	0·22	0·05

The most considerable outbreaks that occurred during the quarter away from London were in Rochdale where 34 deaths occurred, in Ampthill where the deaths were 19, and in Bedlington where the deaths were 22, corresponding to death-rates very largely exceeding that which prevailed in London.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight large towns, in fifty other large town districts, and in the rest, or comparatively rural part, of England and Wales :—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the First Quarter of 1882.

	From Diseases in Cols. 2-8.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.

CERTIFICATION OF CAUSES OF DEATH.—The causes of 127,802, or 91·1 per cent., of the 140,324 deaths in England and Wales last quarter were certified by registered medical practitioners, and 7188, or 5·1 per cent., by coroners in inquest cases. The causes of the remaining 5334, or 3·8 per cent., of the deaths were uncertified. The proportion of uncertified deaths showed a general slight decline from that in the preceding quarter; it did not exceed 1·2 per cent. in London, whereas it averaged 4·4 per cent. in the rest of England and Wales. The percentage was but 0·8 in Wiltshire and 0·9 in the extra-metropolitan portion of Middlesex; while it ranged upwards to 6·6 in Herefordshire, 7·0 in Cornwall, and 8·1 in Cumberland. In Wales 10·0 per cent. of the causes of death were uncertified, the proportion being 9·4 in South Wales, and 11·3 in North Wales.

In the twenty-eight English towns the proportion of uncertified deaths averaged 2·4 per cent.; it did not exceed 1·2 in London, whereas it averaged 3·6 in the twenty-seven provincial towns. The percentage in these provincial towns ranged from 0·7 in Portsmouth and 0·9 in Derby and Cardiff, to 6·0 in Oldham, 6·2 in Bolton, 6·4 in Halifax, 6·5 in Huddersfield, and 7·6 in Salford.

VIOLENT DEATHS.—The deaths referred last quarter to different forms of violence were 4302; these were equal to an annual rate of 0·66 per 1000 of the estimated population, and to 3·1 per cent. of the total deaths. The death-rate from violence in the various counties ranged from 0·18 and 0·30 in Rutlandshire and Cambridge-shire, to 1·04 and 1·05 respectively in the principally mining populations of Durham and Monmouthshire. In the twenty-eight large towns the deaths from violence were equal to an annual rate of 0·76; the rates in the several towns ranged from 0·43 and 0·44 in Plymouth and Leicester, to 1·03 in Newcastle-upon-Tyne, 1·15 in Liverpool, and 1·25 in Wolverhampton.

INQUESTS.—During the first three months of this year 7188 inquest cases were registered, equal to 5·1 per cent. of the total deaths, which slightly exceeded the average proportion in the ten preceding corresponding quarters. The proportion of inquest cases in the twenty-eight towns averaged 6·0 per cent.; while the proportion was so low as 2·2 and 2·6 in Oldham and Preston, it ranged upwards in the other towns to 8·6 in Leicester, and 9·2 in Birmingham.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths recorded last quarter in work-houses, hospitals, and public lunatic asylums were 14,216, equal to 10·1 per cent. of the total deaths; this proportion was slightly in excess of the mean percentage in the first quarters of the ten years 1872-81. In the twenty-eight large towns 7788, or 15·0 per cent., of the total deaths were recorded in the principal public institutions; the percentages of institution deaths did not exceed 5·3 in Plymouth, and 6·6 in Sunderland, whereas it ranged upwards to 17·9 in Manchester, 18·0 in London, and 18·6 in Liverpool. Excluding the twenty-eight large towns, the proportion of institution deaths in the rest of England and Wales did not exceed 7·3 per cent.

HEALTH OF FOREIGN AND COLONIAL CITIES.

A summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the first three months of this year in thirty-one Colonial and Foreign cities, having an aggregate population of nearly fourteen and half millions of persons, was equal to 30·8 per 1000. In the twenty-two European cities the average rate was 31·3 per 1000, against 24·7 in twenty-eight of the largest English towns. Among the thirty-one Colonial and Foreign cities the lowest death-rates were 22·0 in Christiania, 22·8 in Cincinnati, and 23·0 in Stockholm; whereas the rates ranged upwards to 37·0 in Munich, 41·0 in Madras, 42·6 in Buda-Pesth, and 52·5 in St. Petersburg. The deaths from small-pox in Paris, which had declined in the four preceding quarters from 379 to 119, rose again last quarter to 191; the fatal cases of measles and diphtheria also showed a marked increase upon recent quarterly numbers. The deaths from typhoid fever in Paris were 436, and were equal to an annual rate of 0·79 per 1000, against 0·28 from the same disease in London. Small-pox was also fatally prevalent in St. Petersburg, Vienna, Buda-Pesth, Philadelphia, and Cincinnati. In the last-mentioned town no less than 311 deaths resulted from this disease, against but 2 and 41 in the two preceding quarters. Measles caused so many as 621 deaths in Bombay, and was also fatally prevalent in Copenhagen, Christiania, Vienna, and New York. Scarlet fever caused 238 deaths in St. Petersburg, 1154 in New York, and 363 in Brooklyn. Diphtheria was fatally prevalent in St. Petersburg, Berlin, New York, Brooklyn, and Baltimore. The deaths referred to typhus and typhoid fever in St. Petersburg, which in the three preceding quarters had been 1637, 740, and 371, rose last quarter to 605, which were equal to an annual rate of 3·63 per 1000, whereas the death-rate from the same diseases in London did not exceed 0·30 per 1000. Typhoid fever was also fatally prevalent in Naples, Alexandria, and Philadelphia.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion or addition of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE VIII.—LONDON—OUTER RING. Population; Births; Deaths from All Causes, and from the principal Zymotic Diseases; and the Annual Rate of Mortality, during the 13 Week ending 1st April 1882.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since April last has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE IX.—Births and Deaths in the First Quarter of 1882, in 31 Foreign Cities having an estimated aggregate Population of 14,373,654 persons.

CITIES.	POPULATION (enumerated or estimated).	BIRTHS. (Excluding	DEATHS. Stillborn.)	ANNUAL RATE per 1000 Persons living.		DEATHS from EPIDEMIC DISEASES.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

* The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are now 630 in number, and are here arranged topographically under the Registration Counties.
 b These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks. c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS—*continued.*

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1881 (unrevised).	Marriages ending 31 Dec. 1881.	Births ending 31 Mar. 1882.	Deaths	The Deaths in the Quarter are stated by the Registrars to include												
							Registered in Quarter ending 31 Dec. 1881.	Registered in Quarter ending 31 Mar. 1882.	Average in Quarters ending 31 Dec. 1881, 31 Mar. 1882, and 30 June 1882.	Registered in Quarter ending 31 Mar. 1882.	Deaths of	Deaths from							
							Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

The Registration Sub-districts (2169 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

^b For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st April.

a 113: 3.—In the first three weeks of April 4 more deaths from scarlet fever were registered.

b 120: 2.—The 5 deaths from diphtheria occurred in the parish of Earley Newtown, near Reading. The disease was prevalent chiefly amongst children, and has been attributed to defective drainage at St. Stephen's Schools, Reading.

c 123: 2.—The deaths from measles occurred chiefly in the Rural Sanitary District.

a 239 : 3.—Of the 7 deaths from scarlet fever, 6 occurred in two families in the parish of Wreham.

b 243 : 2.—Of the 13 deaths from measles, 12 occurred in the Urban Sanitary District of Malmesbury.

c 245 : 1.—Of the 9 deaths from scarlet fever, 7 occurred in January.

d 247 : 1 & 2.—On the 1st January the sub-district of Bromham was abolished, and the parishes constituting the district of Devizes were re-divided into two sub-districts, Devizes and Lavington. The population of each of these two newly constituted sub-districts has not yet been ascertained.

V.—SOUTH WESTERN COUNTIES.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1881 (unrevised).	Births Registered in the Quarter ending 31 Mar. 1882.	Deaths Average in Quar- ters ending 31 Mar. in the 3 Years 1879-81. Registered in the Quarter ending 31 Mar. 1882.	The DEATHS in the Quarter are stated by the Registrars to include														
						Deaths of Infants under 1 Year of Age.	Deaths from										Inquest Cases. Deaths in Public Institutions.			
							Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping- cough.	Fever.	Diarrhoea.	Cholera.	Violence.

* 628 : 3.—The 2 deaths from diphtheria, and 3 of the deaths from fever (typhoid), occurred within the Urban Sanitary District of Bethesda.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING MARCH 31ST, 1882.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather in January was remarkable for very high readings of the barometer and high mean atmospheric pressure for the month; total absence of snow, the very few nights on which the temperature on grass was below 32° , and consequently very few and slight frosts, and almost total absence of north and north-east winds. It was a mild pleasant month, being very warm during the first fortnight, and the last 5 days, with a rainfall below the average; at the end of the month all agriculture was a month in advance, and many flowers were in blossom in addition to the usual January flowers.

The weather in February was mild and pleasant, with a high barometer continuing till near the end of the month, and a high temperature from the 11th day, vegetation was very forward at the end of the month.

The weather in March was singularly mild and pleasant, being exceptionally warm during the first 20 days, and quite genial; on the 21st and 22nd, a little snow was general over the country, and the temperature on the 21st, 22nd, and 23rd was slightly below the average, but it became warm again on the 24th. The weather from November to this time was most favourable for farming work, and at the end of the quarter vegetation was very forward.

About London the mean daily temperature of the air was above its average till the 16th day, and the mean daily excess of these 16 days was $6^{\circ}6$; it was generally below its average from the 17th to the 26th; the average daily deficiency being $2^{\circ}6$; from the 27th it was warm, the mean daily excess of these four days being $4^{\circ}4$. The first 10 days in February were cold, the average daily deficiency of mean temperature was $3^{\circ}3$; a warm period set in on the 11th of February, which continued with very slight exceptions to the end of the quarter, the average daily excess of temperature for these 49 consecutive days was $5^{\circ}3$.

The mean temperature of the air for January was $40^{\circ}4$, being $3^{\circ}9$ and $2^{\circ}1$ above the average of 111 years and 41 years respectively; it was $8^{\circ}8$, $7^{\circ}2$, and $8^{\circ}5$ higher than in 1881, 1880, and 1879 respectively, and of the same value, viz., $40^{\circ}4$, in the year 1878.

Back to 1771 there have been 18 Januarys as warm as this, viz.:

1775	$40^{\circ}4$	1846	$43^{\circ}7$	1866	$42^{\circ}6$	1875	$43^{\circ}4$
1796	$45^{\circ}3$	1851	$42^{\circ}9$	1869	$41^{\circ}1$	1877	$42^{\circ}7$
1804	$43^{\circ}2$	1852	$42^{\circ}0$	1872	$41^{\circ}3$	1878	$40^{\circ}4$
1806	$40^{\circ}6$	1853	$42^{\circ}4$	1873	$42^{\circ}1$		
1834	$44^{\circ}4$	1863	$41^{\circ}8$	1874	$41^{\circ}7$		

The mean temperature of the air for February was $41^{\circ}8$, being $3^{\circ}1$ and $2^{\circ}4$ above the average of 111 years and 41 years respectively; it was $4^{\circ}1$ higher than in 1881, corresponded with the mean in the year 1880, and $3^{\circ}6$ higher than in 1879.

Back to the year 1771 there have been but 23 Februarys as warm, viz.:

1775	$41^{\circ}9$	1826	$42^{\circ}2$	1856	$42^{\circ}0$	1871	$42^{\circ}4$
1779	$45^{\circ}3$	1833	$42^{\circ}4$	1861	$42^{\circ}1$	1872	$44^{\circ}8$
1794	$44^{\circ}7$	1846	$43^{\circ}9$	1863	$41^{\circ}1$	1877	$43^{\circ}5$
1809	$44^{\circ}1$	1848	$43^{\circ}4$	1867	$44^{\circ}7$	1878	$42^{\circ}2$
1817	$42^{\circ}6$	1849	$43^{\circ}2$	1868	$43^{\circ}0$	1880	$41^{\circ}8$
1822	$43^{\circ}3$	1850	$44^{\circ}7$	1869	$45^{\circ}3$		

The mean temperature of the air for March was 46° , being $40^{\circ}9$ and $4^{\circ}3$ above the average of 111 years and 41 years respectively; it was $3^{\circ}4$, $1^{\circ}7$, and $3^{\circ}8$ higher than in the year 1881, 1880, and 1879 respectively.

Back to 1771 there have been but four instances of a mean temperature in March being as high as 46° , viz.:

1779 it was 47° 1780 it was $49^{\circ}2$ 1822 it was $47^{\circ}3$; and in 1841 $46^{\circ}2$

The mean temperature for the quarter was $42^{\circ}7$, being 4° and $2^{\circ}9$ above the average of 111 years, and 41 years respectively.

Back to 1771 there have been six instances of the mean temperature of the quarter ending March exceeding 42° , viz.:

1779 it was $42^{\circ}4$	1834 it was $42^{\circ}9$	1863 it was $42^{\circ}6$
1822 it was $43^{\circ}5$	1846 it was $43^{\circ}6$	1872 it was $43^{\circ}6$

of these four are of higher temperature than in this quarter, viz. in 1822, 1834, 1846, and 1872.

The mean high day temperature of the air in January was $44^{\circ}4$, being $1^{\circ}6$ above the average of 41 years; in February it was $47^{\circ}7$, being $2^{\circ}3$ above the average, and in March it was $55^{\circ}1$, being $5^{\circ}1$ above the average.

The mean low night temperature of the air was in January $35^{\circ}3$, being $1^{\circ}8$ above its average; in February it was $36^{\circ}2$, being $1^{\circ}9$ above its average, and in March it was $37^{\circ}6$, being $2^{\circ}3$ above the average; therefore the high day temperatures and low night temperatures were both very warm, particularly the high day temperatures in March.

The mean daily range of temperature in January was $0^{\circ}5$ less than the average, and it was $0^{\circ}4$ and $2^{\circ}9$ greater respectively in February and March.

The mean temperature of the air in January was $0^{\circ}6$ higher than in December, in February was $1^{\circ}4$ higher than in January, and in March was $4^{\circ}2$ higher than in February.

(From the preceding 41 years observations the decrease of temperature from December to January is $1^{\circ}6$; the increase of temperature from January to February is $1^{\circ}1$; from February to March is $2^{\circ}3$).

From December to January from all stations there was an increase of temperature varying from $0^{\circ}3$ at Southern to $3^{\circ}5$ at Northern Stations; from January to February there was an increase at all stations of nearly the same amount viz., 1° , and from February to March there was an increase of from 2° to 3° , at stations south of 54° , and of less than 2° , at extreme northern stations.

The mean reading of the barometer for the month of January at the height of 160 feet above the sea was $30^{\circ}185$ in., being $0^{\circ}419$ in. above the average of 41 years, and $0^{\circ}475$ in. above that of 1881, and $0^{\circ}019$ in. below that of 1880.

Back to 1840 there have only been 6 instances of a mean atmospheric pressure so high as this; viz.,—

1858	$30^{\circ}171$ in.	1861	$30^{\circ}011$ in.	1876	$30^{\circ}095$ in.
1859	$30^{\circ}037$ in.	1864	$30^{\circ}044$ in.	1880	$30^{\circ}204$ in.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and that the minus sign (−) signifies below the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follow:—

Direction of Wind.	JANUARY.			FEBRUARY.			MARCH.		
	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.
N.W.	d. $1\frac{1}{2}$	d. $1\frac{1}{2}$	$+ \frac{1}{2}$	d. 3	d. 2	$+1$	d. 3	d. $2\frac{1}{2}$	$+ \frac{1}{2}$
N.	0	3	-3	1	3	-2	$1\frac{1}{2}$	$3\frac{1}{2}$	$-2\frac{1}{2}$
N.E.	1	$3\frac{1}{2}$	$-2\frac{1}{2}$	$1\frac{1}{2}$	$3\frac{1}{2}$	$-2\frac{1}{2}$	0	4	-4
E.	$2\frac{1}{2}$	1	$+1\frac{1}{2}$	2	$2\frac{1}{2}$	$-\frac{1}{2}$	0	$2\frac{1}{2}$	$-2\frac{1}{2}$
S.E.	$7\frac{1}{2}$	$2\frac{1}{2}$	$+4\frac{1}{2}$	2	$1\frac{1}{2}$	$+\frac{1}{2}$	1	$2\frac{1}{2}$	$-1\frac{1}{2}$
S.	$2\frac{1}{2}$	$4\frac{1}{2}$	$-1\frac{1}{2}$	4	3	$+1$	$2\frac{1}{2}$	$2\frac{1}{2}$	$-\frac{1}{2}$
S.W.	$12\frac{1}{2}$	$9\frac{1}{2}$	$+2\frac{1}{2}$	11	8	$+3$	$11\frac{1}{2}$	$7\frac{1}{2}$	$+3\frac{1}{2}$
W.	$8\frac{1}{2}$	$3\frac{1}{2}$	$+5$	$8\frac{1}{2}$	3	$+5\frac{1}{2}$	$11\frac{1}{2}$	$3\frac{1}{2}$	$+8\frac{1}{2}$

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of January are opposite to S.E. and S.W.; in February to S. and S.W.; and in March to W. and S.W.

The minus sign (−) denotes deficiencies below averages. In January the largest numbers are opposite N. and N.E.; in February to N. and N.E.; and in March to N., N.E., and E.

The mean reading of the barometer in February was 30·051 in. being 0·268 in. above the average of 41 years, 0·390 in. above that of 1881, and 0·417 in. above that of 1880.

Back to 1840 there have been but 4 instances of readings as high in February, viz.,

1863	30·141 in.	1878	30·101 in.	1849	30·106 in.	1854	30·041 in.
------	------------	------	------------	------	------------	------	------------

The mean reading of the barometer in March was 29·843 in. being 0·097 in. above the average of 41 years, and 0·115 in. above that of 1881, and 0·094 in. below that of 1880.

Back to 1840, there have been 11 instances of readings in March exceeding 29·84 in., viz.,

1850	30·039 in.	1856	30·011 in.	1874	30·013 in.	1880	29·937 in.
1852	30·007 in.	1870	29·865 in.	1875	29·954 in.	1850	30·039 in.
1854	30·186 in.	1871	29·876 in.	1878	29·890 in.		

The mean reading of the barometer for the quarter was 30·026 in.

Back to 1840 the highest mean readings have been in the years—

1854	when it was	29·948 in.	1874	when it was	29·919 in.
1858	„	29·926 in.	1878	„	29·990 in.
1859	„	29·890 in.	1880	„	29·925 in.

So that there has been no instance back to 1840, of so high mean readings for the 3 months ending March the nearest approach was in 1878 when it was 29·99.

The atmospheric pressure in January was ·364 in. greater than in December, that in February was less than in January by ·134 in. and that in March was less than in February by ·208 in.

(From the 41 years observations the mean pressure in January is ·029 in. less than in December; is ·017 in. greater in February than in January, and ·037 in. less in March than in February.)

About London the mean daily readings of the barometer were below their averages till the 6th day, on the 3rd day it exceeded 0·5 in.; the lowest reading throughout the month at nearly every station took place on this day. The average daily deficiency of pressure till the 6th was 0·23 in. On the 7th day of January the reading was above its average and continued so till February 24th; with the exception of the 11th and 15th days of February, on which days it was 0·07 in. below its average on both days. The readings in January were very remarkable, the average daily pressure from the 16th to the 19th both inclusive was nearly one inch in excess over the average. On the 18th the reading all over the country was remarkably high, being such that when reduced to the level of the sea, it was about 30·95 in. The average excess of pressure both on the 17th and 18th exceeded one inch, and the average excess daily for the 49 days ending with February 24th was 0·51 in. From February 25th to March 6th, there was a deficiency of pressure of nearly one inch on March 1, and averaging 0·55 in. for the 10 days ending March 6; from March 7 to 19 there was an excess of 0·33 in. daily, and from March 20 to the end of the quarter a deficit of 0·1 in. daily.

Thunderstorm occurred on March 21st at Bolton.

Thunder was heard but lightning was not seen in March; on the 21st at Hull; on the 30th and 31st at Rugby.

Solar halos were seen in January; on the 8th at Bermerside, and on the 28th at Torquay. In February on the 10th and 11th at Torquay, and on the 14th at Cardington. In March on the 6th, 8th, and 20th at Torquay, and on the 18th at Cardington.

Lunar halos were seen on five nights in January, and on seven nights in March.

Aurora borealis was seen in February; on the 16th, 17th, and 20th at Bermerside.

Snow fell on the 1st at Carlisle; on the 7th at Bermerside, and on the 29th at Llandudno, Bermerside, Stonyhurst, and Lancaster.

Hail fell in January on the 1st at Whitechurch; on the 3rd at Guernsey and Truro; on the 6th at Truro and Bolton; on the 7th at Plymouth, Bolton, Bermerside, Stonyhurst, and Carlisle; on the 8th at Torquay; on the 12th, 16th, 17th, 18th, 19th, 20th, 26th at Cardington, and on the 27th at Guernsey and Cardington. In February on the 1st, 2nd, 4th, 5th, 6th, and 7th at Oxford; on the 14th at Bolton and Silloth; on the 15th at Whitechurch and Bolton, and on the 22nd, 24th, and 28th at Oxford. In March on the 1st at Torquay; on the 2nd at Guernsey, Truro, Plymouth, Torquay, Whitechurch, Oxford, Royston, and Cambridge; on the 3rd at Guernsey and Truro; on the 6th at Stonyhurst; on the 8th and 9th at Llandudno; on the 20th at Carlisle; on the 21st at Guernsey, Truro, Plymouth, Torquay, Osborne, Oxford, Royston, Cardington, Lowestoft, Stockton, Llandudno, Hull, Stonyhurst, Lancaster, Silloth, and Carlisle; on the 22nd at Truro, Plymouth, Oxford, Royston, Cardington, Lowestoft, Cambridge, and Hull; on the 23rd at Guernsey; on the 24th at Hull; on the 25th at Stockton; on the 26th at Osborne, Oxford, and Llandudno; on the 29th at Truro; on the 30th at Truro, Cardington, and Stockton, and on the 31st at Torquay and Stockton.

Fog prevailed in January on the 12th at Torquay, Ventnor, Strathfield Turgiss, Whitechurch, Oxford, Cambridge, and Hull; on the 13th at Whitechurch, Lowestoft, and Hull; on the 14th at Cambridge, and Hull; on the 15th at Bolton; on the 16th at Totnes, Oxford, Royston, Cambridge, and Stonyhurst; on the 17th at Guernsey, Strathfield Turgiss, Whitechurch, Oxford, Royston, Somerleyton, Lowestoft, Cambridge, Wolverhampton, Bolton, and Hull; on the 18th at Strathfield Turgiss, Whitechurch, Oxford, Royston, Somerleyton, Lowestoft, Cambridge, Wolverhampton, Bolton, Hull, and Stonyhurst; on the 19th at Torquay, Ventnor, Strathfield Turgiss, Whitechurch, Oxford, Somerleyton, Lowestoft, Cambridge, Bolton, and Stonyhurst; on the 20th at

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING MARCH 31ST, 1882.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

NAMES OF STATIONS AND OBSERVERS.	Height of Station Above Sea Level.	Year 1881.	Pressure of Atmosphere in Month.		Temperature of Air in Month.				Mean Temperature.	Vapour.		Mean Reading of Thermometer.	Wind.		Mean Amount of Ozone.	Mean Amount of Cloud.	Number of Days it fell.	Rain.	
			Mean.	Range.	Highest.	Lowest.	Range.	Of all Highest.		Of all Lowest.	Mean.		Dew Point.	In a cubic foot of Air.					Relative Proportion of N. E. S. W.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 134.]

Marriages—January, February, March, 1882.

Births and Deaths—April, May, June, 1882.

[Price 9d.]

*General Register Office, Somerset House,
1st August, 1882.*

The resident POPULATION of the UNITED KINGDOM in the middle of 1882 is estimated at 35,280,299 persons; that of England and Wales at 26,406,820, of Scotland at 3,785,400, and of Ireland at 5,088,079.

In the United Kingdom the *births* of 293,453 children, and the *deaths* of 166,247 persons, were registered in the three months ending 30th June 1882. The recorded natural increase of population was thus 127,206. The registered number of persons married in the quarter ending 31st March 1882 was 108,228.

The birth-rate in the United Kingdom in the second quarter of 1882 was 33·4 per 1000, and the death-rate 18·9. The marriage-rate in the first quarter of 1882 was 12·4 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2168 registration sub-districts of England and Wales during the quarter ending 30th June 1882; and the MARRIAGES in 14,595 churches or chapels, in 8865 registered places of worship unconnected with the Established Church, and in 630 Superintendent Registrars' Offices, in the three months ending 31st March 1882.

Marriages.

During the first three months of this year the marriages of 79,582 persons were registered in England and Wales. This corresponds to an annual rate of 12·2 persons married per 1000 of the estimated population in the middle of this year. This marriage-rate was 1·1 below the mean rate in the corresponding quarters of the ten years 1872–81, but showed an increase of 0·4 upon the rate that prevailed in the first quarter of 1881. The annual marriage-rate in the three months ending March last ranged in the several English counties from 7·5 in the extra-Metropolitan portion of Middlesex and 7·6 in Hertfordshire, to 15·4 and 15·8 in Durham and Northumberland, respectively. Compared with recent corresponding quarters, the marriage-rate in the first quarter of this year showed the largest proportional recovery among the mainly mining populations of the East Riding of Yorkshire and of the counties of Durham, Northumberland, and Monmouth, and of South Wales.

Births.

The births registered in England and Wales during the three months ending June last were 227,429, and showed an increase of 1962 upon the number returned in the corresponding quarter of last year. The annual birth-rate was equal to 34·5 per 1000 of the estimated population; this rate was 1·5 below the average rate in the ten preceding corresponding quarters, and was lower than the rate recorded in the second quarter of any year since 1869, when it was 34·1. The birth-rate last quarter did not exceed 28·6 and 28·9 in Herefordshire and Cambridge-shire, whereas it ranged upwards in the other counties to 39·2 in Staffordshire and 41·9 in Durham.

In twenty-eight of the largest English towns the birth-rate last quarter averaged 35·1 per 1000; it was equal to 33·3 in London, and averaged 36·6 in the twenty-seven provincial towns. The rates in these provincial towns ranged from 29·4 and 29·7 in Huddersfield and Halifax, to 41·1 and 42·8 in Preston and Sunderland. In fifty other large town districts it averaged 36·5; the lowest rates being 24·7 and 25·0 in Bath and Hastings, and the highest 44·5 and 46·5 in Barrow-in-Furness and Ystradyfodwg.

Movement of the Population.

The *natural* increase to the population of England and Wales, or the excess of births over deaths, which had been 107,554 and 104,642 in the second or June quarters of 1880 and 1881, did not exceed 102,351 in the corresponding period of this year. It appears from returns issued by the Board of Trade that 180,808 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. The number of emigrants in the second quarter of 1877 did not exceed 35,681, whereas the numbers since returned in corresponding periods have steadily increased to the 180,808 recorded last quarter. Excluding 72,975 foreigners, and distributing 664 whose nationality was undistinguished, the emigrants of British origin were 107,763, including 55,409 English, 12,473 Scotch, and 39,881 Irish; in the three preceding corresponding quarters the numbers of British emigrants were 45,325, 89,967, and 88,167, respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 2098 in England, 3295 in Scotland, and 7838 in Ireland. Compared with the second quarter of 1881, the proportion of emigration showed a large increase in each division of the United Kingdom; the largest proportional increase occurred in Scotland.

Prices and Pauperism.

The average price of wheat during the three months ending June last was 46s. 9d., and showed an increase of 1s. 4d. upon the mean price in the preceding three months. The mean wholesale price of beef and of mutton last quarter was 6½d. and 7½d., respectively; the mean price of beef was ½d. above, while that of mutton corresponded with, the mean prices prevailing in the first quarter of the year. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 14s. 9d. per ton, which was slightly below the mean price in the previous quarter. Coal was cheaper last quarter than in any previous three months since that ending September 1880. The mean price of Consols was 101l. 17s. 6d., and showed a further increase upon the mean prices in the two preceding quarters. The minimum annual rate of discount charged at the Bank of England, which was reduced to 3l. on the 23rd of March, remained unchanged throughout the quarter ending June.

The average number of paupers (exclusive of lunatics in asylums, and vagrants), relieved in England and Wales on the last day of each week in the quarter was 712,680, of whom 170,546 received in-door and 542,134 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending June was equal to 27·0 per 1000, against 28·2 and 28·1 in the two preceding corresponding quarters; in the spring quarter of 1870 the proportion of paupers was 43·1 per 1000. Compared with the second quarters of 1880 and 1881,

pauperism last quarter showed a further decline of 3·9 per cent. During last quarter 23·9 per cent. of the total paupers were in receipt of in-door relief, whereas in the corresponding period of 1865 the proportion of in-door to total paupers did not exceed 14·0 per cent.

Meteorology.

The remarks upon the Meteorology of the quarter at the Royal Observatory, Greenwich, and at other stations of observation, furnished by Mr. James Glaisher, F.R.S., will be found on pages 65-72, with accompanying Tables. The mean reading of the barometer during the quarter was 29·737 inches, and was 0·046 below the mean reading for the corresponding period in 40 years; the mean showed an excess in May, but was below the average in April and June. The mean temperature of the air in the quarter was 53°·0, and exceeded the average for the corresponding period in 111 years by 0°·7. The mean daily excess of temperature was equal to 1°·8 in April, and 2°·0 in May, whereas the mean was 1°·7 below the average in June. The weather, which was generally warm and genial during April and May, was cold and unseasonable throughout June. The mean temperature in June was lower than in any corresponding month since 1871. At 40 stations of observation the mean temperature of the quarter ranged from 48°·7 at Halifax, to 55°·0 at Barnstaple.

The amount of rain measured at Greenwich during the quarter was 6·13 inches, and was about the third of an inch below the average amount in the corresponding periods of 66 years. The amount in May was 0·71 of an inch below the average, whereas an excess of 0·65 and 0·36 of an inch respectively was recorded in April and June. Rain was measured at Greenwich on 13 days in April, 11 in May, and 19 in June; in all, on 43 of the 91 days in the quarter. At 40 stations of observation the recorded rainfall of the quarter ranged from 6·23 inches at Royston, to 13·43 at Marlborough, 14·49 inches at Stonyhurst, and 17·15 inches at Bolton.

The number of hours of bright sunshine recorded at Greenwich during the quarter was 510·6, showing an excess of 48·7 hours upon the average amount recorded in the corresponding quarters of the five years 1877-81.

State of the Public Health; Deaths.

During last quarter 125,078 deaths were registered in England and Wales, and were equal to an annual rate of 19·0 per 1000 of the estimated population in the middle of this year. This death-rate, although showing an increase of 0·4 upon the unprecedentedly low death-rate that prevailed in the corresponding quarter of last year, was 1·6 below the average rate in the second quarters of the ten years 1872-81. The death-rates in the June quarters of 1880-1-2 were all considerably lower than any that had previously been recorded since civil registration was established in 1837. The rate in the several English counties ranged from 15·2 and 15·8 in Hertfordshire and Berkshire, to 20·7 in Monmouthshire, 21·0 in Durham, and 22·7 in Lancashire. Compared with the rates that prevailed in the second quarter of 1881, those last quarter showed a considerable decline in the South-western counties and in Wales, whereas a marked increase occurred in Nottinghamshire, Lancashire, Durham, and Monmouthshire.

The 125,078 deaths in England and Wales last quarter included 64,659 of males and 60,419 of females; the annual death-rate among males was 20·2, and among females 17·9, per 1000 estimated to be living of each sex. In equal numbers living, the deaths were 113 of males to 100 of females; the proportional excess of male mortality was somewhat lower than in the second quarter of last year, when the deaths of males were as 114 to 100 deaths of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of fifteen and a half millions of persons, the death-rate was equal to 20·2 per 1000; in the remaining and chiefly rural population of about ten and a half millions of persons, the rate did not exceed 17·2. These urban and rural rates were respectively 1·4 and 1·9 below the average rates in the ten preceding corresponding

quarters. Compared with the exceptionally low rates in the corresponding quarter of 1881, the urban rate last quarter showed an increase, while the rural rate had further declined. In equal numbers living, the deaths were 117 in the urban to 100 in the rural population; in the second quarters of the ten years 1872-81 this proportion averaged only 113 to 100. The proportional excess of urban mortality last quarter was therefore considerably above the average.

In twenty-eight of the largest English towns, including London, and having an estimated population of nearly eight and a half millions of persons, the death-rate was equal to 20.9 per 1000, and was 0.7 above the general urban rate. The death-rate did not exceed 19.5 in London, whereas it averaged 22.2 in the twenty-seven provincial towns. The lowest rates among the provincial towns were 16.3 in Cardiff, 18.4 in Birkenhead, and 18.6 in Derby; the rates in the other towns ranged upwards to 25.3 in Bolton, 26.8 in Preston, and 27.9 in Manchester. In fifty other English and Welsh town districts, with an aggregate population estimated at rather more than two and a half millions of persons, the mean death-rate did not exceed 19.6, and was 1.3 below the average rate in the twenty-eight larger towns. The lowest death-rates among these fifty towns were 13.6 in Reading, 14.2 both in Chatham and Dover, and 15.0 in Southampton; the highest rates were 25.4 both in St. Helens and Gateshead, 26.2 both in Warrington and Carlisle, and 26.8 in Ashton-under-Lyne. The excessive mortality in St. Helens, Gateshead, Warrington, and Carlisle was mainly due to exceptional zymotic fatality; and the high death-rate in Ashton-under-Lyne was in great measure caused by the large proportion of infant mortality.

MORTALITY AT DIFFERENT AGES.—The 125,078 deaths last quarter included 28,135 of infants under one year of age, 66,069 of children and adults aged between one and 60 years, and 30,874 of persons aged upwards of 60 years.

The rate of infant mortality, measured by the proportion of deaths under one year to births registered, was equal to 124 per 1000; in the ten preceding corresponding quarters the proportion of infant mortality averaged 130 per 1000, and ranged from 139 in 1875, to 121 in 1881. The lowest county rates of infant mortality last quarter were 85 in Wiltshire, 90 in Dorsetshire, and 91 in Hertfordshire; the highest were 132 in Staffordshire, 133 in Nottinghamshire, 140 in Durham, and 151 in Lancashire. In the twenty-eight great towns the proportion of infant mortality averaged 142, and exceeded the general English rate by 18. The rate did not exceed 134 in London, whereas it averaged 149 in the provincial towns, among which it ranged from 90 and 103 in Cardiff and Birkenhead, to 161 in Liverpool, 163 in Bradford, 169 in Blackburn, 176 both in Bolton and Manchester, and 179 in Preston. In the fifty other town districts infant mortality averaged 136 per 1000 births; while the proportion was so low as 83 in Chatham, 87 in Burton-upon-Trent, and 88 in Swansea, it ranged upwards to 177 in Warrington, 184 in Middlesbrough, 185 in York, and 214 in Ashton-under-Lyne.

Among persons aged between one and 60 years the annual rate of mortality in England and Wales was equal to 11.2 per 1000 persons estimated to be living at these ages, against an average of 11.9 in the ten preceding corresponding quarters. In the twenty-eight great towns the death-rate at these ages averaged 13.2 per 1000, ranging from 9.3 and 9.6 in Norwich and Leicester, to 16.4 in Bolton, 16.9 both in Portsmouth and Liverpool, and 18.3 in Manchester.

The annual rate among persons aged upwards of 60 years averaged 62.7 per 1000 in England and Wales, and was 7.4 below the mean rate at these ages in the ten preceding second or spring quarters of 1872-81. This death-rate among elderly persons was lower than that recorded in the second quarter of any of the twelve years 1870-1881, the nearest approach to it being 65.4 in the second quarter of 1880. The death-rate at these ages in the twenty-eight towns averaged 67.1 per 1000, and was 5.0 above the general rate; in London the death-rate of elderly persons was 61.9, while in the twenty-seven provincial towns it averaged 72.1, and ranged from 51.9 and 57.7 in Derby and Cardiff, to 82.9 in Halifax, 85.3 in Preston, and 88.8 in Manchester.

The rate of mortality at all ages last quarter was 7.8 per cent. below the average rate in the ten preceding corresponding quarters; the decline was equal to 4.6

per cent. among infants under one year of age, to 5·9 per cent. among children and adults aged between one and 60 years, and to 10·6 per cent. among persons aged upwards of 60 years.

ZYMOTIC DISEASES.—The 125,078 deaths from all causes included—

4359	attributed to whooping-cough.
3899	„ measles.
2817	„ scarlet fever.
2022	„ diarrhœa.
1769	„ fever.
871	„ diphtheria.
372	„ small-pox.

Thus the total number of deaths ascribed to these causes was 16,109, corresponding to an annual rate of 2·45 per 1000, against an average rate of 2·50 for the ten preceding second quarters.

The lowest county rates from these causes were 0·38 in Westmorland and 1·03 in Norfolk, while the highest were 3·24 in Monmouthshire, 3·44 in Lancashire, and 3·48 in Nottinghamshire. In the twenty-eight great towns (Table VI.), the zymotic rate averaged 3·31, varying from 0·81 in Norwich and 1·02 in Halifax, to 4·87 in Brighton, 6·46 in Portsmouth, and 7·22 in Bolton. In fifty other large town districts (Table VII.) the rate averaged 2·63, but ranged from 0·57 and 0·88 in Yarmouth and Swansea, to 6·28 in Gateshead, 7·81 in Warrington, 7·88 in St. Helens, and 8·47 in Carlisle.

The deaths from *whooping-cough* numbered 4359, corresponding to an annual rate of 0·66 per 1000, against an average rate of 0·53 for the ten preceding second quarters. The mortality from this disease was, therefore, considerably above the average.

The lowest county rates were 0·13 in Norfolk and Westmorland, and 0·14 in Leicestershire, while the highest were 0·96 in Middlesex (extra-metrop.), and 1·00 in Essex. The rate in the twenty-eight great towns was 1·13, varying from 0·03 in Leicester and 0·09 in Cardiff, to 1·33 in Manchester, 1·56 in London, and 1·89 in Bristol. In fifty other large town districts the rate was 0·50, ranging upwards, however, to 1·56 in Middlesbrough, and 3·89 in Carlisle.

The deaths from *measles* were 3899, corresponding to an annual rate of 0·59 per 1000, against an average rate of 0·41 in the ten preceding second quarters. The mortality from this disease was thus considerably above the average.

The lowest county rates were 0·05 in Buckinghamshire and 0·08 in Huntingdonshire and Somersetshire, while the highest were 1·01 in Hampshire, 1·07 in Worcestershire, and 1·29 in Lancashire. In Wales there was almost an entire immunity from this disease, the rate in South Wales having been 0·04 and in North Wales 0·05. The rate in the twenty-eight great towns was 0·86, varying from 0·03 in Sunderland, and 0·09 in Birkenhead, to 3·00 in Bradford, 3·68 in Portsmouth, and 3·87 in Bolton. In fifty other large town districts the rate was 0·82, ranging upwards to 2·36 in Cheltenham, 2·47 in Shrewsbury, 3·29 in Carlisle, 5·76 in St. Helens, and 6·03 in Warrington. Measles fatality was also excessive in the following sub-districts: Charlton Kings, Great Waltham, Bromsgrove, Prescot, Ulverston, and Stow-on-the-Wold.

The deaths from *scarlet fever* were 2817, corresponding to an annual rate of 0·43 per 1000, against an average of 0·54 in the ten preceding second quarters.

The lowest county rates were 0·10 in Somersetshire and 0·12 in Cornwall and Suffolk, while the highest were 1·34 in the East Riding, 1·49 in Monmouthshire, and 1·54 in Nottinghamshire. The rate in the twenty-eight great towns was 0·44, varying from 0·00 in Norwich and Plymouth, to 1·59 in Hull, and 1·76 in Nottingham. In fifty other large town districts the mean rate was 0·45; the highest rates were 1·29 in Ystradyfodwg, 1·71 in Merthyr Tydfil, 2·59 in Oxford, and 3·27 in Gloucester. Excessive fatality of scarlet fever also occurred in the following sub-districts:—Aylesbury, Kimbolton, Upwell, St. Martin (Oswestry), Melton Mowbray, Bingley, Rothwell, Barmbrough, Patrington, Tredegar, and Bridgend.

The deaths from *diarrhœa* numbered 2022, corresponding to an annual rate of 0·31 per 1000, against an average of 0·33 in the ten preceding second quarters.

The lowest county rates were 0·06 in Westmorland and 0·09 in Wiltshire, while the highest were 0·48 in Leicestershire, 0·50 in Staffordshire, and 0·51 in Lancashire. The rate in the twenty-eight great towns was 0·34, varying from 0·14 in Sunderland, and 0·19 in Derby, Birkenhead, and Sheffield, to 1·01 in Bolton and 1·44 in Preston. In fifty other large town districts the rate was 0·39, and somewhat exceeded the rate in the twenty-eight larger towns; it ranged upwards to 1·01 in Walsall, and 1·12 in West Bromwich.

The deaths from *fever* (including typhus, enteric fever, simple and ill-defined forms of continued fever), numbered 1769, corresponding to an annual rate of 0·27 per 1000, against an average rate of 0·38 in the ten preceding second quarters.

The lowest county rates were 0·10 in Berkshire, Wiltshire, and Herefordshire, while the highest were 0·43 in Lancashire and 0·52 in Durham. The rate in the twenty-eight great towns was 0·29, varying from 0·05 in Norwich, and 0·10 in Huddersfield, to 0·87 in Portsmouth, and 0·88 in Liverpool. In fifty other large town districts the rate was 0·35 per 1000, and exceeded by ·06 the rate in the twenty-eight great towns; in Barrow-in-Furness the rate was 1·06, and in Gateshead 2·25. The high death-rate from fever in Gateshead was due to an outbreak of typhus. The mortality from fever was also excessive in East Grinstead, Crowland, Barnoldswick, Wooler, Loughor, and St. David's sub-districts.

The deaths ascribed to *diphtheria* numbered 871, corresponding to an annual rate of 0·13 per 1000, against an average rate of 0·10 in the ten preceding second quarters.

The lowest county rates were 0·03 in Cumberland and 0·04 in Derbyshire and East Riding, while the highest were 0·36 both in Bedfordshire and Hampshire. The rate in the twenty-eight great towns was 0·15, varying from 0·00 in Norwich, Derby, Blackburn, Halifax, Sunderland, and Newcastle, to 0·22 in London, 0·28 in Cardiff, and 0·71 in Portsmouth. In the fifty other large towns the rate did not exceed 0·07; the rate, however, was excessive in Walsall, Macclesfield, and Darlington. Local outbreaks of the disease were also recorded in the following sub-districts: Folkestone, Hambledon, Balsham, St. Mary Magdalen (Taunton), Gainsborough, and Sutton-in-Ashfield.

The deaths from *small-pox* numbered 372, corresponding to an annual rate of 0·06 per 1000, against an average rate of 0·21 in the ten preceding second quarters. This was the lowest rate of mortality from this disease in any quarter since the end of 1880.

Of the 372 deaths, 128 were registered in London (exclusive of 30 in its Outer Ring of suburban districts), where the death-rate was 0·13. Of the remainder, 83 were registered in one or other of the twenty-seven great provincial towns, in four of which the rate was higher than in London, viz., in Hull 0·15, in Leeds 0·20, in Bolton 0·34, and in Nottingham 0·50. From the following table it will be seen that small-pox mortality in London with its Outer Ring declined progressively from the second quarter of 1881, while the mortality in the rest of England and Wales as progressively rose until the quarter just past when there was a small improvement. The rate in London, however, was still more than three times as high as in the rest of England and Wales:—

Quarter ending	Greater London.	Rest of England and Wales.	Annual Rate per 1000.	
			Greater London.	Rest of England and Wales.
June - - 1881	1,107	106	0·93	0·02
September - „	522	152	0·44	0·03
December - „	307	164	0·26	0·03
March - 1882	262	271	0·22	0·05
June - - „	158	214	0·13	0·04

The deaths from small-pox in the rest of England and Wales (exclusive of Greater London and the twenty-seven great provincial towns) were 131; 10 occurred in Suffolk, 18 in Staffordshire, 12 in Lincolnshire, 37 in Lancashire, and 5 in Durham. The most noticeable outbreaks that occurred during the quarter caused 10 deaths in Wednesbury, 6 in Tipton, 10 in Lincoln, 11 in Rochdale, and 5 in Gateshead.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight great towns, in fifty other large town districts, and in the rest, or comparatively rural part, of England and Wales :—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Second Quarter of 1882.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diarrhoea.

Watering-Places and Summer Resorts.

The statistics of mortality during the past or second quarter are given as usual (Table VIII.) for forty-six of the principal English health-resorts. The mortality given is not always that of the actual watering-place itself, but in some cases that of the district or sub-district in which the watering-place is situated. As a rule the death-rate in the watering-place is likely to be slightly higher than in the whole district or sub-district, the watering-place having more of an urban character than the surrounding country; but occasionally the reverse may be the case. This, however, though doubtless a matter of interest to the Sanitary Authorities severally intrusted with the care of the watering-place, and of the district outside its limits, is of comparatively little importance to the holiday visitor, who by no means confines himself to the immediate boundary of the place in which he actually sleeps.

The mean annual death-rate in these forty-six health-resorts during last quarter was 16.8, the zymotic rate being 1.72. These rates contrast favourably not only with those for all England and Wales, which were 19.0 and 2.45 respectively, but also with those of that more rural part of the country, which remains after excluding from the calculation the seventy-eight chief towns or urban districts. For in this comparatively rural part the general death-rate was 17.8 and the zymotic rate was 1.94.

It is but just to these health-resorts to note that their death-rates are doubtless in some degree higher than they would otherwise be, owing to the very fact of their being health-resorts; of their being, that is, places to which persons in weak health flock in considerable numbers, in the hope of finding benefit. This, however, affects the general death-rate much more than the death-rate from zymotic diseases.

The zymotic rate, that is the rate of mortality per 1000 from the principal zymotic diseases, was 0.00 in Lyme Regis, Sidmouth, Dawlish, and Dartmouth; and did not exceed 1.00 in Whitby, Yarmouth, Lowestoft, Southend, Herne Bay, Eastbourne, Worthing, Bognor, Weymouth, Exmouth, Torquay, Ilfracombe, Weston-

super-Mare, Aberystwith, Beaumaris, Bangor, Llandudno, Rhyl, Malvern, Leamington, Buxton, Matlock, and Harrogate. In the remainder, it was above 1·00, but under 3·00, with the exceptions of Folkestone, where it was 3·38 mainly owing to diphtheria; of Blackpool, where it was 4·05 mainly from measles; of New Brighton, where it was 4·46 mainly from scarlet fever; and of Brighton where it was 4·87 mainly from measles, whooping-cough, and scarlet fever.

In none of the forty-six towns or districts was any death registered as due to small-pox.

CERTIFICATION OF CAUSES OF DEATH.—The causes of 113,809, or 91·0 per cent., of the 125,078 deaths in England and Wales last quarter were certified by registered medical practitioners, and 6615, or 5·3 per cent., by coroners in inquest cases. The causes of the remaining 4654, or 3·7 per cent., of the deaths were uncertified. The proportion of uncertified deaths showed a further slight decline from that in the preceding quarter; it did not exceed 1·1 per cent. in London, whereas it averaged 4·2 per cent. in the rest of England and Wales. The percentage was but 1·4 in Wilts and Sussex, and 1·6 in Hampshire; while it ranged upwards to 5·7 in Huntingdonshire, 6·2 in Cumberland, and 6·5 in Cornwall. In Wales 10·5 per cent. of the causes of death were uncertified, the proportion being 9·8 in South Wales, and 12·6 in North Wales.

In the twenty-eight English towns the proportion of uncertified deaths averaged 2·4 per cent.; it did not exceed 1·1 in London, whereas it averaged 3·4 in the twenty-seven provincial towns. The percentage in these provincial towns ranged from 0·5 in Birkenhead, and 1·0 both in Portsmouth and Derby, to 6·0 in Salford, 6·5 in Hull, 6·6 in Oldham, and 7·4 in Halifax.

VIOLENT DEATHS.—The deaths referred last quarter to different forms of violence were 4224; these were equal to an annual rate of 0·64 per 1000 of the estimated population, and to 3·4 per cent. of the total deaths. The death-rate from violence in the various counties ranged from 0·38 in Herefordshire and 0·39 in Bedfordshire, to 0·84 in Durham and Cumberland, and 0·87 in Northumberland. In the twenty-eight great towns the deaths from violence were equal to an annual rate of 0·74; the rates in the several towns ranged from 0·38 both in Plymouth and Derby, and 0·43 in Hull, to 1·03 in Newcastle-upon-Tyne, 1·06 in Cardiff, and 1·25 in Liverpool.

INQUESTS.—During the second quarter of this year 6615 inquest cases were registered, equal to 5·3 per cent. of the total deaths, which slightly exceeded the average proportion in the ten preceding corresponding quarters. The proportion of inquest cases in the twenty-eight towns averaged 6·2 per cent.; while the proportion did not exceed 2·5 in Hull and 2·7 in Oldham, it ranged upwards in the other towns to 8·3 in Manchester, 8·5 in Birmingham, and 11·0 in Cardiff.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths recorded last quarter in work-houses, hospitals, and public lunatic asylums were 13,095, equal to 10·5 per cent. of the total deaths; this proportion was 0·8 in excess of the mean percentage in the second quarters of the ten years 1872–81. In the twenty-eight great towns 7035, or 15·9 per cent., of the total deaths were recorded in the principal public institutions; the percentage of institution deaths did not exceed 7·1 in Sunderland, and 7·5 in Bradford, whereas it ranged upwards to 16·8 in Liverpool, 17·9 in Bristol, 19·7 in Manchester, and 20·2 in London. Excluding the twenty-eight large towns, the proportion of institution deaths in the rest of England and Wales did not exceed 7·5 per cent.

HEALTH OF FOREIGN AND COLONIAL CITIES.

A summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the second three months of this year in twenty-nine Colonial and Foreign cities,

having an aggregate population of thirteen and three quarter millions of persons, was equal to 29.0 per 1000. In the twenty-two European cities the average rate was 30.0 per 1000, against 20.9 in twenty-eight of the largest English towns. Among the twenty-nine Colonial and Foreign cities the lowest death-rates were 19.9 in Christiania, 21.6 in Philadelphia, 22.0 in Stockholm, and 22.2 in the Hague; whereas the rates ranged upwards to 35.0 in Vienna, 35.8 in Prague, 38.2 in Buda-Pesth, and 53.6 in St. Petersburg. The fatal cases of small-pox in Paris, which had been 119 and 191 in the two preceding quarters, further rose last quarter to 248; and the 399 deaths from measles also showed a considerable further increase upon the numbers returned in recent quarters. The deaths referred to typhoid fever in Paris were no fewer than 553 (against 436 in the preceding quarter), and were equal to an annual rate of 0.99 per 1000, against 0.18 from the same disease in London. Small-pox caused 381 deaths in Vienna during the quarter, against 200 and 258 in the two previous quarters; this disease was also prevalent in Brussels, St. Petersburg, and Buda-Pesth. Measles caused 320 deaths in Bombay (against 621 in the preceding quarter), 114 in Amsterdam, 130 in Turin, and 319 in New York. Scarlet fever was fatally prevalent during the quarter in St. Petersburg, Berlin, Vienna, New York, and Brooklyn. Diphtheria caused 325 deaths in St. Petersburg, 459 in Berlin, and 443 in New York. The deaths referred to typhus and typhoid fever in St. Petersburg, which had been 371 and 605 in the two preceding quarters, declined to 507, which were, however, equal to an annual rate of 3.04 per 1000, whereas in London the death-rate from the same diseases did not exceed 0.18 per 1000. Typhoid fever was also prevalent in Turin, New York, and Philadelphia.

PRELIMINARY TABLES.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

TABLE V.—28 Towns.—Population; Persons to an Acre; Births, Deaths; Mean Temperature, Rainfall; in the Second Quarter of 1882.

CITIES AND BOROUGH.	ESTIMATED POPULATION in the middle of the Year 1882.	Persons to an Acre. (1882.)		Registered in 13 Weeks ending 1st July 1882. * The figures for Folkestone relate only to the civil population. The population of Shorncliffe Camp and the deaths occurring therein have been excluded.

† The rates of mortality for these towns have been corrected by the exclusion of deaths occurring in County Hospitals and Marine Asylums situate within the districts or sub-districts taken to represent the watering places, or by the exclusion or addition of a portion of the deaths in Union Workhouses in cases where a portion of the Union only is embraced by the area taken, where the Workhouse is situate outside that area.

‡ The area of that portion of the parish of Tunbridge which forms part of the town of Tunbridge Wells, and is situated within the sub-district of that name, has been estimated from the proportion of the population enumerated within and without that sub-district. The correct area of each portion of the parish is not known to the Registrar-General.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since April last has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE X.—**Births and Deaths in the Second Quarter of 1882, in 29 Foreign Cities having an estimated aggregate Population of 13,772,666 persons.**

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND.
 INFANTS under one year of Age, and of PERSONS aged 60 years and upwards from
 HOOPING-COUGH, FEVER, DIARRHŒA, CHOLERA, and VIOLENCE, also INQUEST CASES and
 the DIVISIONS, REGISTRATION COUNTIES, SUPERINTENDENT REGISTRARS' DISTRICTS, and
 ENGLAND.

a The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are now 630 in number, and are here arranged topographically under the Registration Counties.

b These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks. c See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS.—continued.

Superintendent Registrars' Districts.		Area in Statute Acres.	Enumerated Population, 1881 (unrevised).	Marriages Registered in Quarter ending 31 Mar. 1882.	Births Registered in Quarter ending 30 June 1882.	Deaths	The DEATHS in the Quarter are stated by the Registrars to include													
							Deaths of	Deaths from												
								Infants under 1 Year of Age.	Persons aged 40 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.	Deaths in Public Institutions.

The Registration Sub-districts (2105 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *W* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

* For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st July.

a 45: 1.—There has been an epidemic of small-pox at Snodland, but energetic measures were taken, and no deaths have occurred.

b 49: 2.—A severe outbreak of small-pox in the parish of Hadlow is stated to be traceable to a case in which measles was erroneously certified as the cause of death.

c 60: 1. Of the 15 deaths from scarlet fever, 11 occurred in Milton Urban Sanitary District.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING JUNE 30TH, 1882.

By JAMES GLAISHER, Esq., F.R.S., &c.

The weather in April was generally warm till towards the end of the month, with frequent rain, the total being in excess of the average, but not more than was needed, the three preceding months having been drier than usual. The atmospheric pressure was in excess of the average till the 10th, and generally in defect afterwards. The prevailing winds were from the S., S.W., and W.

On the 28th, there were violent gales of wind and squalls passing over Jersey and Guernsey, and on the 29th a severe gale passed over the South of Wales and the South of England, which proved to be very injurious to fruit trees and the foliage of trees throughout its course. This gale was thought to be in some places as severe as that of October 14th, 1881. The observer at Osborne says, twelve large trees were overturned; the observer at Southbourne says, houses were unroofed. At all places the leaves of trees on the S.W. or windward side was spoken of as blackened, as if by frost, or as if scorched by fire, this effect was attributed by several observers to saline matter carried by the wind. The gale entirely changed the appearance of the country over which it passed, but it did not extend far north. At Cambridge there was a gale after 3 p.m.; at Oxford a storm from 5 p.m. to 9 p.m.; at Lowestoft a gale after 4 p.m.; at Hull the day was fine with showers; at Bradford the day was fine throughout; at Stonyhurst there was a snow storm, and snow fell at Liverpool and Bolton. The instances of rain exceeding an inch in one day, were on the 1st at Plymouth, on the 12th at Totnes, on the 13th at Stonyhurst, on the 25th at Caterham and London, on the 29th at Wrotesley, Bolton, and Bradford, and on the 30th at Halifax.

The weather in May with the exception of about a week in the beginning of the month was warm and genial. The fall of rain at most places was less than the average. The atmospheric pressure, except from the 20th to the 26th, was generally above the average. The month was favourable to all growing crops, grass abundant; there was no instance at any of the stations of a fall of rain to the depth of an inch on one day during the month.

The weather in June was cold and unseasonable throughout, the temperature, with the exception of 2 or 3 days at the beginning of the month, was below its average. The atmospheric pressure was below its average from the 3rd to the 14th and from the 18th to the 24th; the weather was variable; the fall of rain was in excess of the average, it was a wet, ungenial month, and bad for hay making, and proved to be the coldest June since 1871.

About London the mean daily temperature of the air was above its average with very slight exception till the 24th day, and the mean daily excess of these 24 days was $2^{\circ}3$; it was below its average from April 25th to May 1st; the average daily deficiency of these 7 days being $3^{\circ}9$; from May 2nd to May 13th it was generally warm, the mean daily excess of these 12 days was $2^{\circ}3$; from May 14th to 18th it was cold every day, the mean daily deficiency of temperature being $2^{\circ}6$; from May 19th to the end of the month it was warm, the average daily excess of temperature of these 13 days being $2^{\circ}5$; from June 1st to the end of the month, with the exception of the 3rd, 4th, and 7th, which were slightly above their average, every day was cold, and the average daily deficiency of mean temperature for these 30 days was $3^{\circ}4$. The instances of rain exceeding an inch in one day were on the 3rd at Bolton and Stonyhurst, on the 5th at Plymouth, on the 13th at Bolton and Stonyhurst, on the 22nd at Bradford and Leeds, and on the 23rd at Nottingham and Barmerside.

The mean temperature of the air for April was $47^{\circ}9$, being $1^{\circ}8$ and $0^{\circ}8$ above the average of 111 years and 41 years respectively; it was $2^{\circ}0$, higher than in the year 1881, $0^{\circ}8$ higher than in 1880, and $4^{\circ}7$ higher than in 1879.

The mean temperature of the air for May was $54^{\circ}5$, being $2^{\circ}0$ and $1^{\circ}9$ above the average of 111 years and 41 years respectively; it was $0^{\circ}4$, $1^{\circ}9$, and $6^{\circ}1$ higher than in 1881, 1880, and 1879, respectively.

The mean temperature of the air for June was $56^{\circ}5$, being $1^{\circ}7$ and $2^{\circ}4$ below the average of 111 years and 41 years respectively; it was $2^{\circ}2$, $1^{\circ}0$, $0^{\circ}4$ lower than in the year 1881, 1880, and 1879, respectively.

The mean temperature for the quarter was $53^{\circ}0$, being $0^{\circ}7$ and $0^{\circ}1$ above the average of 111 years, and 41 years, respectively.

The mean high day temperature of the air in April was $57^{\circ}6$, being the same as the average of 41 years; in May it was $66^{\circ}2$, being $2^{\circ}0$ above the average, and in June it was $66^{\circ}3$, being $4^{\circ}7$ below the average.

The mean low night temperature of the air in April was $39^{\circ}8$, being $0^{\circ}6$ above its average; in May it was $44^{\circ}2$, being $0^{\circ}5$ above its average, and in June it was $48^{\circ}9$, being $1^{\circ}0$ below its average; therefore the high day temperature in April was that of its average, in May was a little above its average, and in June was nearly 5° below.

The low night temperature in both April and May was a little above the average, and in June was about 1° colder than the average.

The mean daily range of temperature in April was $0^{\circ}6$ smaller than the average, in May it was $1^{\circ}6$ greater than the average, and in June it was $3^{\circ}7$ smaller than the average.

The mean temperature of the air in April was $1^{\circ}9$ higher than in March, in May was $6^{\circ}6$ higher than in April, and in June was $2^{\circ}0$ higher than in May.

(From the preceding 41 years observations the increase of temperature from March to April is $5^{\circ}3$, from April to May is $5^{\circ}6$, and from May to June is $6^{\circ}2$).

From March to April from all stations there was an increase of temperature; of $1^{\circ}5$ at station South of latitude 51° , of $1^{\circ}9$ at stations between latitude 51° and 53° and gradually decreasing from $1^{\circ}9$ at latitude 53° to $0^{\circ}2$ at extreme northern stations; from April to May there was an increase at all stations of nearly the same amount, the mean value was $5^{\circ}7$, and the mean increase from May to June was $2^{\circ}2$, being of nearly this value at all stations.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and that the minus sign (—) signifies below the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follow:—

Direction of Wind.	APRIL.			MAY.			JUNE.		
	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.

W.	5	$2\frac{1}{2}$	+2 $\frac{1}{2}$	$2\frac{1}{2}$	$2\frac{1}{2}$	+ $\frac{1}{2}$	$7\frac{1}{2}$	4	+3 $\frac{1}{2}$

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of April are opposite to S.W. and W.; in May to S. and S.E.; and in June to W. and S.

The minus sign (—) denotes deficiencies below averages. In April the largest numbers are opposite N. and N.W.; in May to S.W. and N.; and in June to N.E. and N.

About London the mean daily readings of the barometer were below their averages till the 2nd day. The average daily deficiency of the two days was 0.07 in. On the 3rd of April the reading was above its average and continued so till the 10th, the average daily excess was 0.25 in. From the 11th till the 18th there was a deficiency of pressure (exceeding six tenths of an inch on the 13th and 14th), and for those eight days averaging 0.32 in. daily. From the 19th till the 21st the average excess daily was 0.17 in. From April 22nd till May 5th the average daily deficiency was 0.34 in. From May 6th till the 19th the average daily excess for these 14 days was 0.33 in. From the 20th to 26th the daily deficiency was 0.21 in. From May 27th to June 2nd the average

excess daily was 0.26 in. From the 3rd to the 14th the average deficiency daily was 0.19 in. From the 15th to the 17th the average excess daily was 0.12 in. From the 18th to 24th the average daily deficiency was 0.12 in., and from the 25th till the end of the month there was an average excess daily of 0.11 in.

The mean reading of the barometer for the month of April at the height of 159 feet above the sea was 29.602 in., being 0.152 in. below the average of 41 years, and 0.17 in. below that of 1881; and 0.099 in. below that of 1880.

The mean reading of the barometer in May was 29.875 in. being 0.086 in. above the average in 41 years, and 0.054 in. below that of 1881, and 0.035 in. below that of 1880.

The mean reading of the barometer in June was 29.735 in. being 0.071 in. below the average of 41 years, 0.071 in. below that of 1881, and 0.002 in. above that of 1880.

The atmospheric pressure in April was 0.241 in. below that in March, that in May was 0.273 in. above that in April, and that in June was 0.140 in. below that in May.

(From the 41 years observations the mean pressure in April is 0.008 in. greater than in March; in May is 0.035 in. greater in April and in June is 0.017 in. greater than in May).

From March to April there was a decrease of atmospheric pressure, at stations south of latitude 51°, of 0.30 in.; between the latitudes of 51° and 52° of 0.26 in.; between 52° and 53° of 0.20 in.; between 53° and 54° of 0.18 in., and north of latitude 54° of 0.09 in.

From April to May there was an increase everywhere and of nearly the same amount, viz., 0.28 in. From May to June there was a decrease 0.09 in. at stations south of 51° gradually increasing, going northward to 0.20 in. at stations north of 54°.

Thunderstorm occurred in April on the 2nd at Guernsey; on the 13th at Liverpool; on the 24th at Royston, Somerleyton, and Leicester; on the 28th at Bolton and Bradford; and on the 30th at Llandudno and Stonyhurst. In May on the 1st at Bolton, Bernerside, Stonyhurst, and Bradford; on the 3rd at Guernsey, Somerleyton, Rugby, Wolverhampton, Bolton, Bernerside, Hull, Stonyhurst, and Bradford; on the 4th at Rugby; on the 7th at Cambridge and Leicester; on the 8th at Wolverhampton; on the 22nd at Barnet, Rugby, Wolverhampton, and Liverpool; on the 23rd at Oxford, Stockton, Cambridge, Leicester, Liverpool, Bolton, and Llandudno; and on the 26th at Halifax, Bradford, and Hull. In June on the 4th and 6th at Stonyhurst; on the 7th and 8th at Cambridge; on the 9th at Osborne and Cambridge; on the 10th at Barnet; on the 12th at Salisbury; on the 15th at Halifax; on the 18th at Osborne and Halifax; on the 23rd at Liverpool and Stonyhurst; on the 24th at Liverpool and Llandudno; on the 25th at Liverpool; on the 26th at Whitechurch, Barnet, Stockton, and Wolverhampton.

Thunder was heard but lightning was not seen in April; on the 2nd at Oxford and Stockton; on the 15th at Salisbury and Blackheath; on the 28th at Guernsey and Hull; and on the 30th at Stockton. In May on the 1st at Wolverhampton; on the 2nd at Halifax; on the 3rd at Salisbury, Strathfield Turgiss, Whitechurch, Oxford, Royston, and Liverpool; on the 7th at Hull and Carlisle; on the 8th at Whitechurch; on the 11th at Llandudno; on the 22nd at Guernsey, Ventnor, Oxford, Cambridge, Bolton, and Halifax; on the 23rd at Whitechurch, Barnet, Llandudno, and Halifax; on the 26th at Bolton; on the 27th at Halifax, Hull, Stonyhurst, and Leeds. In June on the 2nd at Liverpool; on the 3rd at Somerleyton, Stockton, and Liverpool; on the 4th at Barnet, Somerleyton, and Halifax; on 6th at Halifax; on the 9th at Whitechurch, Oxford, Stockton; on the 12th at Barnstaple, Somerleyton, Lowestoft; on the 15th at Stockton and Cambridge; on the 16th at Cambridge; on the 18th at Somerleyton, Stockton, and Silloth; on the 23rd at Llandudno; on the 24th at Halifax, Stonyhurst, and Silloth; on the 25th at Somerleyton, Llandudno, and Stonyhurst; on the 26th at Oxford, Llandudno, Stonyhurst, and Carlisle; on the 27th at Carlisle; on the 28th at Llandudno; on the 29th at Silloth and Carlisle; and on the 30th at Barnstaple, Wolverhampton, and Stonyhurst.

Lightning was seen but thunder was not heard in April, on the 5th at Barnet and Cambridge; in May, on the 3rd at Royston and Cambridge, on the 7th at Barnet, Oxford, Royston, Liverpool, and Halifax, on the 8th at Barnet, and on the 22nd at Osborne; in June, on the 24th at Lowestoft.

Solar halos were seen in April, on the 1st, 16th, and 21st at Oxford, on the 21st at Stonyhurst, on the 25th at Hull. In May on the 2nd at Torquay and Oxford, on the 3rd at Oxford, on the 6th and 9th at Torquay, Strathfield, and Oxford, on the 18th and 21st at Bath. In June on the 12th at Halifax, on the 17th at Oxford, and on the 25th at Liverpool.

Lunar halos were seen on three nights in April, and on three nights in May.

Snow fell in April on the 29th at Liverpool, Bolton, and Stonyhurst. In May on the 15th at Cambridge.

Hail fell on April on the 1st at Torquay; on the 2nd at Guernsey; on the 5th at Salisbury; on the 13th at Llandudno; on the 14th at Truro and Royston; on the 15th at Torquay; on the 24th at Whitechurch, Oxford, Royston, Cardington, Stockton, and Bolton; on the 25th at Stonyhurst; on the 26th at Torquay; on the 27th, 28th, 29th at Truro; on the 28th at Truro and Hull; on the 29th at Truro; on the 30th at Torquay, Oxford, Cambridge, and Carlisle. In May on the 1st at Torquay, Halifax, and Stonyhurst; on the 3rd at Stockton, Wolverhampton, and Bolton; on the 8th at Cambridge; on the 22nd at Stockton; on the 23rd at Llandudno; on the 26th at Hull; on the 28th and 30th at Bath. In June on the 4th at Halifax; on the 6th at Llandudno; on the 7th and 9th at Cambridge; on the 10th at Barnet, Bolton, and Halifax; on the 12th at Ventnor, Marlborough, Barnet, Oxford, Stockton, Cambridge, Bolton, and Stonyhurst; on the 14th at Bolton; on the 15th at Cambridge and Halifax; on the 18th at Marlborough and Cambridge; and on the 23rd at Bolton.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING JUNE 30TH, 1882.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

NAMES OF STATIONS AND OBSERVERS.	Height of Station above Sea Level.	Months.	Pressure of Atmosphere in Month.		Temperature of Air in Month.			Mean Temperature.		Vapour.			Mean Reading of Thermometer.			Wind.			Mean Amount of Cloud.	Number of Days it fell.	Rain.

The highest temperatures of the air were at Nottingham, 73°·2; at Gloucester and Cambridge, 77°; and at Rugby 76°·6.

The lowest temperatures of the air were at Rugby, 23°·5; at Carlisle, 23°·7; and at Holkham, 25°·7.

The greatest daily ranges of temperatures were at Rugby, 53°·1; at Nottingham and Carlisle, 52°, and at Salisbury and Gloucester 49°.

The least daily ranges of temperatures were at Guernsey, 10°·6; at Lowestoft, 10°·7; and at Llandudno, 12°.

The greatest number of days of rain were at Bolton and Totnes, 57; at Barnstaple and Leicester, 55; and at Plymouth, Barmerside, and Bradford, 54.

The least number of days of rain were at Osborne, 32; at Strathfield Turgiss, Gloucester, and Silloth, 40; and at Royston, Bedford, and Somerleyton, 41.

The heaviest falls of rain in the quarter were at Bolton, 17·15 inches; at Stonyhurst, 14·49 inches; and at Marlborough, 13·43 inches.

The least falls of rain in the quarter were at Greenwich, 6·13 inches; at Royston, 6·23 inches; at Camden Square, 6·33 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS OF LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the Sea.										WIND.				Relative Pro- portion of		Mean Amount of Ozone.		Mean Amount of Cloud.		RAIN.					
		Mean of all Highest.										Relative Pro- portion of				Mean Amount of Ozone.		Mean Amount of Cloud.		RAIN.							
		Mean of all Lowest.										Relative Pro- portion of				Mean Amount of Ozone.		Mean Amount of Cloud.		RAIN.							
		Range of Temperature in the Quarter.										Relative Pro- portion of				Mean Amount of Ozone.		Mean Amount of Cloud.		RAIN.							
		Mean of all Highest.	Mean of all Lowest.	Mean Monthly Range of Temperature.	Mean Daily Range of Temperature.	Mean Temperature of the Air.	Mean Temperature of the Dew Point.	Mean Elastic Force of Vapour.	Mean Weight of Vapour in a cubic foot of Air.	Mean additional Weight required for saturation.	Mean degree of Humidity.	Mean Weight of a cubic foot of Air.	Mean Heading of Max- imum in Rays of Sun.	Mean Heading of Min- imum on Grass.	Mean Estimated Strength.	N.	E.	S.	W.	Mean Amount.	Mean Number of Days it fell.	Mean Amount inches.

For Her Majesty's Stationery Office.

[8.—2800.—8/82.]

QUARTERLY RETURN
OF
MARRIAGES, BIRTHS, AND DEATHS
REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF
ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 135.] **Marriages**—*April, May, June, 1882.*
Births and Deaths—*July, August, September, 1882.* [Price 9d.]

*General Register Office, Somerset House,
1st November, 1882.*

The resident POPULATION of the UNITED KINGDOM in the middle of 1882 is estimated at 35,280,299 persons; that of England and Wales at 26,406,820, of Scotland at 3,785,400, and of Ireland at 5,088,079.

In the United Kingdom the *births* of 280,216 children, and the *deaths* of 153,343 persons, were registered in the three months ending 30th September 1882. The recorded natural increase of population was thus 126,873. The registered number of persons married in the quarter ending 30th June 1882 was 128,572.

The birth-rate in the United Kingdom in the third quarter of 1882 was 31·5 per 1000, and the death-rate 17·2. The marriage-rate in the second quarter of 1882 was 14·6 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2163 registration sub-districts of England and Wales during the quarter ending 30th September 1882; and the MARRIAGES in 14,602 churches or chapels, in 8922 registered places of worship unconnected with the Established Church, and in 630 Superintendent Registrars' Offices, in the three months ending 30th June 1882.

Marriages.

During the three months ending June last, the marriages of 105,532 persons were registered in England and Wales, corresponding to an annual rate of 16·0 per 1000 of the estimated population in the middle of this year. This marriage-rate was 0·3 below the mean rate in the corresponding quarters of the years 1872–81, but showed a further increase of 0·5 upon the rates that prevailed in the second quarters of 1881 and 1882. The annual marriage-rate in the second quarter of this year ranged in the several English counties from 10·1 in Huntingdonshire and 10·8 in Cambridgeshire, to 18·2 in Northumberland, and 19·3 in both Lincolnshire and Nottinghamshire. Compared with the previous corresponding quarter, the marriage-rate in the three months ending June last showed the largest proportional re-

covery in the mainly rural counties of Buckingham, Bedford, Devon, Lincoln, and Cumberland.

Births.

The births registered in England and Wales during the three months ending September last were 220,118, and showed an increase of 4152 upon the number returned in the corresponding quarter of last year. The annual birth-rate was equal to 33·1 per 1000 of the estimated population, and although 1·4 below the average rate in the ten preceding corresponding quarters, showed an increase of 0·2 upon the exceptionally low rate of last year. The birth-rate last quarter did not exceed 26·7 in Huntingdonshire, 27·3 in Herefordshire, and 27·4 in Westmorland, whereas it ranged upwards in the other counties to 36·4 in Staffordshire, and 38·9 in Durham.

In the twenty-eight great towns the birth-rate last quarter averaged 34·7 per 1000. It was 33·6 in London, and averaged 35·6 in the twenty-seven provincial towns. The rates in these provincial towns ranged from 30·7 in Plymouth, 31·0 in Brighton, and 31·2 in Halifax, to 39·2 in Cardiff, and 40·4 in Sunderland. In fifty other large town districts the birth-rate averaged 34·7; the lowest rates were 21·6 and 22·8 in Bath and Cheltenham, and the highest 42·0 in Stoke-upon-Trent and Burton-on-Trent, and 42·4 in Middlesbrough.

Movement of the Population.

The *natural* increase of the population of England and Wales, or the excess of births over deaths, which had been 87,782 and 105,762 in the third or September quarters of 1880 and 1881, declined to 102,004 in the corresponding period of this year. It appears from returns issued by the Board of Trade that 98,681 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 1406 whose nationality was undistinguished, and excluding 23,274 foreigners, the emigrants of British origin were 75,407, including 49,845 English, 9,123 Scotch, and 16,439 Irish; in the three preceding corresponding quarters the numbers of British emigrants were 55,019, 63,311, and 72,665, respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 1888 in England, 2410 in Scotland, and 3231 in Ireland. Compared with recent corresponding quarters the proportion of emigration showed a further increase in England and Scotland, whereas it continued to decline in Ireland.

Prices and Pauperism.

The average price of wheat during the three months ending September last was 47s. 3d., and showed an increase of 6d. upon the mean price in the preceding three months, although it was 1s. 7d. below that which prevailed in the third quarter of last year. The mean wholesale price of beef and of mutton last quarter was 6 $\frac{5}{8}$ d. and 7 $\frac{1}{2}$ d., respectively; the mean price of beef was $\frac{1}{8}$ d. above, while that of mutton corresponded with, the mean prices prevailing in the three preceding months. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 16s. 5d. per ton, showing an increase of 1s. 8d. upon that prevailing in the previous quarter. The mean price of Consols was 99l. 17s. 6d., and showed a decline of 2l. from the high price in the three months ending June. The minimum annual rate of discount charged at the Bank of England, which had been reduced to 3l. on the 23rd of March last, was raised to 4l. on the 17th August, and to 5l. on the 14th September, at which it remained until the end of the quarter.

The average number of paupers (exclusive of lunatics in asylums, and vagrants), relieved in England and Wales on the last day of each week in the quarter was

695,201, of whom 165,280 received in-door and 529,921 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending September was equal to 26·3 per 1000, against 27·3 and 27·0 in the two preceding corresponding quarters; in the summer quarter of 1870 the proportion of paupers was 41·2 per 1000. Compared with the third quarters of 1880 and 1881, the proportion of pauperism last quarter showed a further decline of 2·6 per cent. During last quarter 23·8 per cent. of the total paupers were in receipt of in-door relief, whereas in the corresponding period of 1865 the proportion of in-door to total paupers did not exceed 14·0 per cent.

Meteorology.

The remarks upon the Meteorology of the quarter, at the Royal Greenwich Observatory, and at other stations of observation, furnished by Mr. James Glaisher, F.R.S., will be found with accompanying tables on pages 65-72. The mean reading of the barometer was 29·709 inches, and was 0·086 below the mean reading for the corresponding periods in 40 years; the mean reading for each month was below the average. The mean temperature of the air in the quarter was 58°·1, and was 1°·6 below the average for the corresponding period in 111 years. Excepting the first two weeks of August and the first week of September, the weather was, for the most part, unseasonably cold and unsettled throughout the quarter. The mean temperature showed a deficiency of 1°·2 in July, 1°·3 in August, and 2°·2 in September. Excepting 1877, last September was colder than that of any year since 1863. At 39 stations of observation the mean temperature of the quarter ranged from 54°·4 in Bolton, to 59°·5 in Barnstaple.

The amount of rain measured at Greenwich during the quarter was 6·01 inches, and was nearly an inch and a half below the average amount in the corresponding periods of 66 years. The deficiency of rainfall was 1·29 inches in August, and the fall was slightly below the average in each of the other months of the quarter. Rain was measured at Greenwich on 19 days in July, 15 in August, and 14 in September; in all, on 48 of the 92 days in the quarter. At 39 stations of observation the recorded rainfall of the quarter ranged from 4·73 inches at Royston, to 15·55 inches at Barnstaple, and 16·34 inches at Stonyhurst.

The number of hours of bright sunshine recorded at Greenwich during the quarter was 420·4, and was identical with the number in the corresponding period of last year; the average amount in the third or summer quarters of the five years 1877-81 was 412·6 hours.

State of the Public Health; Deaths.

During last quarter 118,114 deaths were registered in England and Wales, and were equal to an annual rate of 17·7 per 1000 of the estimated population. This death-rate was no less than 1·5 per 1000 below the average rate in the corresponding quarters of the ten years 1872-81, but exceeded by 0·9 the exceptionally low rate in the third quarter of 1881. The rates in the several English counties ranged from 12·5 in Dorsetshire, 13·1 in Westmorland, 13·6 in Wiltshire, and 13·8 both in Shropshire and the extra-metropolitan portion of Surrey, to 20·8 in Northumberland, 21·2 in Lancashire, and 22·0 in Durham. Compared with the rates in the third or summer quarter of last year, those last quarter showed the largest increase in Suffolk, Herefordshire, Cheshire, Lancashire, Yorkshire, Durham, Northumberland, Cumberland, and Monmouthshire.

The 118,114 deaths in England and Wales last quarter included 61,111 of males, and 57,003 of females; the annual death-rate among males was 18·9, and among females 16·7, per 1000 estimated to be living of each sex. In equal numbers living, the deaths were 113 of males to 100 of females; the proportional excess of male mortality was somewhat lower than in the third quarter of last year, when the deaths of males were as 114 to 100 deaths of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of fifteen and a half millions of persons, the death-rate was equal to 19·5 per 1000; in the remaining and chiefly rural population of about ten and a half millions of persons, the rate did not exceed 15·2. These urban and rural rates were respectively 1·7 and 1·1 below the average rates in the ten preceding corresponding quarters; each of these rates exceeded, however, by 1·0 the respective rates that prevailed in the summer quarter of last year. In equal numbers living, the deaths were 128 in the urban to 100 in the rural population; whereas the average proportion in the third quarters of the ten years 1872–81 was 130 to 100. The decline in the excess of urban mortality last quarter was probably due to the comparative absence of diarrhœa.

In the twenty-eight great towns, including London, and having an estimated population of nearly eight and a half millions of persons, the death-rate was equal to 20·6 per 1000, and was 1·1 above the general urban rate. The death-rate did not exceed 18·6 in London, whereas it averaged 22·2 in the twenty-seven provincial towns, among which it ranged from 14·9 and 16·4 in Derby and Bristol, to 25·6 in Hull, 25·7 in Preston, and 28·3 in Sunderland. In fifty other large town districts, with an aggregate population estimated at rather more than two and a half millions of persons, the mean death-rate did not exceed 18·9, and was 1·7 below the average rate in the twenty-eight great towns. The lowest rates among these fifty towns were 13·0 in Cheltenham, 14·3 in Southport, 14·6 in Reading, and 15·0 in Burton-upon-Trent; the highest rates were 24·4 in Warrington and Tynemouth, 26·1 in Middlesbrough, and 26·3 in Accrington. The high rates in the last-mentioned towns were mainly due to excessive zymotic fatality.

MORTALITY AT DIFFERENT AGES.—The 118,114 deaths last quarter included 32,952 of infants under one year of age, 58,233 of children and adults aged between one and 60 years, and 26,929 of persons aged upwards of 60 years.

The rate of infant mortality, measured by the proportion of deaths under one year to births registered, was equal to 150 per 1000; in the ten preceding corresponding quarters the proportion of infant mortality averaged 165 per 1000, and ranged from 115 in 1879 to 195 in 1880. The lowest county rates of infant mortality last quarter were 76 in Dorsetshire, 79 in Wiltshire, and 90 in Shropshire; the highest were 181 in Lancashire, 188 in Warwickshire, 196 in Durham, and 210 in Leicestershire. In the twenty-eight great towns the proportion of infant mortality averaged 190, and exceeded the general English rate by 40. Whereas the rate did not exceed 165 in London, it averaged 210 in the provincial towns, among which it ranged from 122 and 138 in Derby and Bristol, to 246 in Sunderland, 249 in Nottingham, 257 in Hull, 268 in Preston, and 317 in Leicester. In the fifty other town districts infant mortality averaged 167 per 1000 births; while the proportion was but 100 in Maidstone, 101 in Shrewsbury, and 105 in Dover, it ranged upwards to 283 in Tynemouth, 289 in York, and 297 in Yarmouth.

Among persons aged between one and 60 years the annual rate of mortality in England and Wales was equal to 9·8 per 1000 persons estimated to be living at these ages, against an average of 10·4 in the ten preceding corresponding quarters. In the twenty-eight great towns the death-rate at these ages averaged 11·6 per 1000, ranging from 6·9 and 8·7 in Norwich and Leicester, to 15·4 in Manchester, 15·6 in Liverpool, and 16·5 in Sunderland.

The annual rate among persons aged upwards of 60 years averaged 54·1 per 1000 in England and Wales, and was 1·1 below the mean rate at these ages in the ten preceding third or summer quarters of 1872–81. The death-rate at these ages in the twenty-eight towns averaged 58·6 per 1000, and was 4·5 above the general rate; in London this rate did not exceed 53·5, while it averaged 63·5 in the twenty-seven provincial towns, and ranged from 40·8 and 47·5 in Derby and Nottingham, to 78·1 in Birkenhead, 84·3 in Huddersfield, and 88·4 in Wolverhampton.

The rate of mortality at all ages last quarter was 7·8 per cent. below the average rate in the ten preceding corresponding quarters; the decline was equal to 9·1 per cent. among infants under one year of age, to 5·8 per cent. among children and adults aged between one and 60 years, and to 2·0 per cent. among persons aged upwards of 60 years.

ZYMOTIC DISEASES.—The 118,114 deaths from all causes included—

10,041	attributed to diarrhœa.
3164	„ scarlet fever.
2668	„ whooping-cough.
2044	„ measles.
1864	„ fever.
835	„ diphtheria.
209	„ small-pox.

Thus the total number of deaths attributed to these causes was 20,825, corresponding to an annual rate of 3·13 per 1000, against an average rate of 3·94 for the ten preceding third quarters.

The lowest county rates from these causes were 0·62 in Westmorland and 0·70 in Wiltshire, while the highest were 4·79 in Durham, and 5·70 in the East Riding. In the twenty-eight great towns the rate averaged 4·29, varying from 2·10 in Halifax, 2·23 in Bristol, and 2·43 in Plymouth, to 7·69 in Sunderland, 7·85 in Preston and 8·54 in Hull. In fifty other considerable towns the rate averaged 3·64, while in the remainder, or comparatively rural part of England and Wales, it was 2·41.

The deaths ascribed to *diarrhœa* were 10,041, corresponding to an annual death-rate of 1·50 per 1000, against an average of 2·11 for the ten preceding third quarters.

The rates in counties varied from 0·22 in Herefordshire and 0·31 in Wiltshire, to 3·02 in Leicestershire, and 3·65 in the East Riding. In the twenty-eight great towns the rate averaged 2·35, varying from 0·86 in Halifax, 0·96 in Derby, and 0·98 in Bristol, to 5·67 in Leicester, 5·76 in Hull, and 5·96 in Preston, these three towns being the same as almost invariably head the list. In fifty other considerable towns the rate averaged 1·90, rising to 4·05 in Gateshead, 4·16 in York, 4·61 in Bury, and 4·93 in Yarmouth. In the remainder of England and Wales, excluding, that is, the seventy-eight towns, the rate was 0·99; the rate, however, calculated upon the population enumerated in 1881, was 4·7 in Romford and 6·8 in Radcliffe (Bury) sub-districts.

The deaths from *scarlet fever* were 3164, corresponding to an annual death-rate of 0·48 per 1000, against an average of 0·61 in the ten preceding third quarters.

The rates in counties varied from 0·06 in Wiltshire and in Westmorland, to 1·06 in Lincolnshire, 1·07 in Nottinghamshire, and 1·68 in Monmouthshire. In the twenty-eight great towns the rate averaged 0·50, varying from 0·04 in Bolton and 0·05 in Plymouth and Birkenhead, to 1·01 in Sunderland, 1·11 in Hull, and 1·16 in Nottingham. In fifty other considerable towns the rate averaged 0·62, rising to 1·07 in Merthyr Tydfil, 1·40 in South Shields, 1·49 in Oxford, 2·42 in Warrington, 4·38 in Gloucester, and 7·96 in Accrington. In England and Wales, exclusive of these seventy-eight towns, the rate was 0·44, being, however, excessively high, in no case less than 7·0 (calculated upon the population in 1881), in the following sub-districts:—Upwell, Bideford, Berkeley, Barrow-on-Soar, Gainsborough, Worksop, Epworth, and Aberystruth.

The deaths from *whooping-cough* numbered 2668, corresponding to an annual death-rate of 0·40 per 1000, against an average rate of 0·36 for the ten preceding third quarters.

In the counties the rates varied from 0·05 in Leicestershire, and 0·08 in Wiltshire, to 0·64 in Buckinghamshire, and 0·77 in Cambridgeshire. In the twenty-eight great towns the rate averaged 0·56, but was 1·01 in Oldham and 1·25 in Birkenhead. In fifty other considerable towns the rate averaged 0·42,

but was 1·18 in Carlisle, 1·28 in Dudley, 1·34 in Lincoln, and 1·41 in Tyne-mouth. In the rest of England and Wales, excluding, that is, the seventy-eight towns, the rate was 0·31, but was high in the sub-districts of March, Alphington, Tattershall, and Kerry.

The deaths from *measles* numbered 2044, corresponding to an annual rate of 0·31 per 1000, against an average rate of 0·25 for the ten preceding third quarters.

No death from this disease was registered in Huntingdonshire, and one only in each of the counties of Buckinghamshire, Dorsetshire, Shropshire, and Rutlandshire, while the death-rate from it was as high as 1·45 in Herefordshire. In the twenty-eight great towns the rate averaged 0·37, varying from 0·05 in Norwich, and 0·08 in Preston, to 1·55 in Sunderland, and 2·55 in Huddersfield. In fifty other considerable towns the rate averaged 0·29, rising to 1·14 in Middlesbrough, 1·38 in Colchester, 1·44 in Wigan, and 1·88 in Accrington. In England and Wales, exclusive of these 78 towns, the rate was 0·27, being, however, excessively high, in no case under 5·0 (calculated upon the population in 1881), in the sub-districts of Calbourne, Watlington, and Pemberton. In this last-mentioned sub-district the deaths from measles were 55, and the rate (calculated upon the population in 1881) no less than 11·8.

The deaths from *fever* numbered 1864, corresponding to an annual death-rate of 0·28 per 1000, against an average rate of 0·41 for the ten preceding third quarters.

No deaths from this cause were registered in the little counties of Rutlandshire and Huntingdonshire, while elsewhere the rate varied from 0·03 in Herefordshire, and 0·06 in Hertfordshire, Cambridgeshire, and Westmorland, to 0·59 in Durham and 0·69 in North Wales. In the twenty-eight great towns the rate averaged 0·31, varying from 0·00 in Oldham, to 0·85 in Liverpool, and 0·91 in Sunderland. In fifty other considerable towns the rate averaged 0·30, rising to 0·71 in Stockport, 0·76 in Gateshead, and 0·97 in Barrow-in-Furness. In England and Wales, exclusive of these seventy-eight towns, the rate was 0·26, but in the sub-district of Bangor the deaths ascribed to fever were 43, and the rate (calculated upon the population in 1881) no less than 11·5. This serious outbreak in the Bangor sub-district extended also into the adjoining sub-district of Llanllechid, where 11 deaths were recorded, mainly at Bethesda.

The deaths ascribed to *diphtheria* were 835, corresponding to an annual death-rate of 0·13 per 1000, against an average rate of 0·10 for the ten preceding third quarters.

No deaths from this disease were registered in Westmorland nor in Huntingdonshire, while the rates were 0·30 in Berkshire and in Shropshire, and 0·31 in Essex. In the twenty-eight great towns the rate averaged 0·15, the highest rate being 0·22 in London, 0·23 in Cardiff, and 0·28 in Portsmouth. In fifty other considerable towns the rate averaged 0·07, while in England and Wales, exclusive of these seventy-eight towns, it was 0·12. The mortality was in excess, and the rate (calculated upon the population in 1881) in no case under 2·0, in the following sub-districts: Whitstable, Hambleton, Melbourne, Harlow, Taunton St. James, Wellington (Shropshire), and Sutton-in-Ashfield.

The deaths from *small-pox* numbered 209, corresponding to an annual death-rate of 0·03 per 1000, against an average rate of 0·10 for the ten preceding third quarters. The rate was lower than in any quarter since the end of 1880.

Of the 209 deaths, 63 occurred either in London or in its Outer Ring, and 5 in adjoining home counties. Of the remainder, no less than 50 occurred in Staffordshire, mainly in the sub-districts of Wednesbury and Tipton. In the borough of Newcastle-on-Tyne there were 21, and in Birmingham 9 deaths: in the sub-district of Gateshead 15 deaths; and 11 in the district of Nottingham.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight great towns, in fifty other large town districts, and in the rest, or comparatively rural part, of England and Wales:—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Third Quarter of 1882.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diarr- hoea.

England and Wales, less the 78 Towns -	2·41	0·02	0·27	0·41	0·12	0·31	0·26	0·99

CERTIFICATION OF CAUSES OF DEATH.—The causes of 107,155, or 90·8 per cent., of the 118,114 deaths in England and Wales last quarter were certified by registered medical practitioners in attendance during the last illness, and 6423, or 5·4 per cent. by coroners in inquest cases. The causes of the remaining 4536, or 3·8 per cent. of the deaths were uncertified. The proportion of uncertified deaths slightly exceeded that recorded in the preceding quarter; it was only 1·2 per cent. in London, but averaged 4·3 per cent. in the rest of England and Wales. While the percentage of uncertified deaths did not exceed 1·3 in the extra-metropolitan portion of Middlesex, 1·6 in Hampshire, and 1·7 in the extra-metropolitan portion of Surrey, it ranged upwards to 6·2 in Cornwall and Cumberland, 6·7 in Herefordshire, and 6·9 in Durham. In Wales 9·9 per cent. of the causes of death were uncertified, showing a decline from the percentage in the previous quarter; the proportion was 9·7 in South Wales, and 10·1 in North Wales.

In the twenty-eight great towns the proportion of uncertified deaths averaged 2·4 per cent.; it did not exceed 1·2 in London, but averaged 3·3 in the twenty-seven provincial towns. The percentage in these provincial towns ranged from 0·6 in Portsmouth, and 1·0 in Nottingham and Derby, to 6·1 in Sunderland, 6·9 in Halifax, and 9·2 in Wolverhampton. The proportion in Wolverhampton was nearly double that which prevailed in either of the first two quarters of the year.

VIOLENT DEATHS.—The deaths referred last quarter to different forms of violence were 4231; they were equal to an annual rate of 0·64 per 1000 of the estimated population, and to 3·6 per cent. of the total deaths. The death-rate from violence in the various counties ranged from 0·37 and 0·38 in Herefordshire and Wiltshire, to 0·98 in Cumberland, 0·99 in Westmorland, and 1·06 in Monmouthshire. In the twenty-eight great towns the deaths from violence were equal to an annual rate of 0·67 per 1000; the rates in the several towns ranged from 0·32 in Plymouth, 0·39 in Sheffield, and 0·40 in Portsmouth, to 0·97 both in Birkenhead and Liverpool, 1·01 in Sunderland, and 1·03 in Newcastle-upon-Tyne.

INQUESTS.—During the third quarter of this year 6423 inquest cases were registered, equal to 5·4 per cent. of the total deaths, which slightly exceeded the average proportion in the ten preceding corresponding quarters. The proportion of inquests in the twenty-eight towns averaged 5·8 per cent.; while the proportion did not exceed 2·1 in Preston and 2·5 in Bradford, it ranged upwards in the other towns to 8·3 in Manchester, 8·6 in Bristol, and 9·3 in Derby.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths recorded last quarter in work-houses, hospitals, and public lunatic asylums were 11,245, equal to 9·5 per cent. of the total deaths; this proportion was 0·9 in excess of the mean percentage

in the third quarters of the ten years 1872-81. In the twenty-eight great towns 6151, or 14·2 per cent., of the total deaths were recorded in the principal public institutions; the percentage of institution deaths did not exceed 4·8 in Sunderland, and 5·3 in Preston, whereas it ranged upwards to 16·9 in Brighton, 17·4 in Wolverhampton, 18·0 in Manchester, and 18·6 in London. Excluding the twenty-eight great towns, the proportion of institution deaths in the rest of England and Wales did not exceed 6·8 per cent.

HEALTH OF FOREIGN AND COLONIAL CITIES.

A summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the third or summer quarter of this year in twenty-eight Colonial and Foreign cities having an aggregate population of thirteen and a half millions of persons, was equal to 27·3 per 1000. In the twenty-one European cities the average rate was 26·6 per 1000, against 20·6 in the twenty-eight great English towns. Among the twenty-eight Colonial and Foreign cities the lowest death-rates were 15·9 in Geneva, 19·6 in Rotterdam, 19·8 in Turin, and 21·3 in The Hague; whereas they ranged upwards to 33·0 in New York, 33·7 in Madras, 36·0 in Breslau, and 44·2 in St. Petersburg. The fatal cases of small-pox in Paris, which had been 119, 191, and 248 in the three preceding quarters, declined last quarter to 120; the deaths referred to typhoid fever, however, which in the first two quarters of the year had been 436 and 553, rose last quarter to 738, and were equal to an annual rate of 1·32 per 1000, against but 0·17 from the same disease in London. Since the end of the quarter this epidemic prevalence of typhoid fever in Paris has largely increased, no less than 801 deaths having been referred to it during the four weeks of October. The fatality of measles and of diphtheria in Paris showed a marked decline during the quarter. The deaths referred to small-pox in Vienna, which had increased in the three preceding quarters from 200 to 381, declined to 131; this disease caused 162 deaths in St. Petersburg, 113 in Baltimore, and 83 in Buda-Pesth during the quarter. The deaths from measles in Bombay, which had been as many as 621 and 320 in the two previous quarters, declined to 21 last quarter; the fatality of this disease also showed a marked decline in Amsterdam, Copenhagen, Turin, New York, and Philadelphia. Diphtheria caused 317 deaths in St. Petersburg, 369 in Berlin, and 203 in Philadelphia. The deaths referred to typhus and typhoid fever in St. Petersburg, which in the two preceding quarters had been 605 and 507, further fell to 217, which were, however, equal to an annual rate of 1·30 per 1000, while in London the death-rate from these diseases was but 0·18 per 1000. Typhoid fever was also prevalent in Berlin, New York, and Philadelphia.

PRELIMINARY TABLES.

TABLE I.—**Marriages, Births, and Deaths** registered in **England and Wales** in the Years **1872-82**, and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

The Deaths registered in the Quarter include

Swansea - - - - M -	86,114	841	390	38.7	15.2	1.4	119	Llangafelach, Swansea, and Llan-samlet Sub-districts.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the table approximately represent, are Municipal or Parliamentary. Imp. D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportional number of deaths occurring in County Asylums and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the Union is embraced by the area taken, or where the Workhouse is situated outside that area.

TABLE VIII.—**Annual Death-rate** per 1,000 living from **Diarrhoea** in **ENGLAND**, and in 78 LARGE TOWNS during the Third or Summer Quarter of each of the Years 1880, 1881, and 1882.

ROMFORD (part of) - - -	20,839	192	87	17	36.9	16.7	3.3

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since April last has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE XIII.—**Births and Deaths in the Third Quarter of 1882, in 28 Foreign Cities having an estimated aggregate Population of 13,467,197 persons.**

^a The *Registration or Union Counties* consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

c See page 14, note b.

NOTE.--The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

REGISTRATION COUNTIES, and SUPERINTENDENT REGISTRARS' DISTRICTS of ENGLAND. a. The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are now 430 in number, and are here arranged topographically under the Registration Counties.

b. These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks. c. See page 14, note b.

II.—SOUTH EASTERN COUNTIES.—SUPERINTENDENT REGISTRARS' DISTRICTS.—continued.

No.	Superintendent Registrars' Districts.	Area in Statute Acres.	Enumerated Population, 1881 (unrevised).	Marriages		Deaths		The DEATHS in the Quarter are stated by the Registrars to include											
				Registered in Quarter ending 30 June 1882.	Registered in Quarter ending 30 Sept. 1882.	Average in Quarters ending 30 June, 30 Sept., and 31 Dec. 1881-82.	Registered in Quarter ending 30 Sept. 1882.	Deaths of		Deaths from									
								Infants under 1 Year of Age.	Persons aged 60 Years & upwards.	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping-cough.	Fever.	Diarrhoea.	Cholera.	Violence.	Inquest Cases.

The Registration Sub-districts (2163 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 30th September.

* 623 : 3.—Of the 11 deaths from fever, 8 occurred in Bethesda Urban Sanitary District.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING SEPTEMBER 30TH, 1882.

By JAMES GLAISHER, Esq., F.R.S., &c.

With the exception of the first three days, which were fine and warm, the month of July was cold; the maximum temperature in the month, at many stations south of latitude 52° , did not rise above 73° or 74° , and it exceeded 78° at a very few places indeed over the country; it was in this respect a great contrast to July 1881, in which month the temperature exceeded 90° on two days, and was above 80° on many days. The atmospheric pressure was generally below its average, and rain fell in showers on 17 to 20 days at stations situated in south of England, the number gradually increasing to 25, and to 29 at northern stations. The wind was mostly from the S.W., frequently blowing strongly, and there was almost a total absence of wind from the east. The month was cold, wet, and ungenial—a bad month for haymaking, and many fields remained uncut at the end of the month.

The month of August was moderately fine at the beginning, but cold and showery from the 14th; the maximum temperatures in this month were low, at many stations not reaching 80° during the whole month, and the stations at which it exceeded 80° were few in number. The fall of rain was generally less than the average. The atmospheric pressure was above its average till the 11th, and was, with the exception of the 17th, constantly below during the remainder of the month.

The weather in the month of September, during the first week was moderately fine, but from the 7th was cold and unsettled; the highest temperature reached in the month was less than 70° at several stations, but exceeded 70° generally; the mean temperature of the month was lower than of any other September back to 1863, excepting that of 1877; the atmospheric pressure was constantly below its average from the 10th to the 29th; rain was generally less than the average, but was above at a few stations. The month on the whole was cold, and the air more humid than usual, particularly in the Midland Counties, and in the early afternoon hours, causing harvest operations to be slow.

Upon the whole the unsettled weather which began in June has continued till the end of this quarter; the number of days within these four months which could be described as summerlike have been very few.

About London the mean daily temperature of the air was slightly above its average till the 3rd day; from the 3rd to the 28th, with the exceptions of the 14th and 27th, which were slightly above, the temperature was always low, the average daily deficiency of these 25 days was $2^{\circ}8$; from July 29th to August 14th, there were 2 or 3 days together, warm, and then 2 or 3 days cold, very nearly balancing each other; from August 15th to the end of the month it was cold, the average deficiency of daily temperature being $2^{\circ}6$; from September 1 to 6, the average daily excess of temperature was 1° ; and from the 7th to the end of the month it was cold; on the 14th the daily temperature was 12° below its average, and the daily deficiency of those 28 days was $2^{\circ}8$.

The mean temperature of the air for July was $60^{\circ}4$, being $1^{\circ}2$ and $1^{\circ}8$ below the average of 111 years and 41 years respectively; it was $5^{\circ}0$ lower than in the year 1881, $1^{\circ}3$ lower than in 1880, but $2^{\circ}3$ higher than in 1879.

The mean temperature of the air for August was $59^{\circ}6$, being $1^{\circ}3$ and $1^{\circ}9$ below the averages of 111 years and 41 years respectively; it was $0^{\circ}5$ higher than in 1881, but $3^{\circ}2$ and $0^{\circ}3$ lower than in 1880 and 1879, respectively.

The mean temperature of the air for September was $54^{\circ}3$, being $2^{\circ}2$ and $2^{\circ}8$ below the averages of 111 years and 41 years respectively; it was $1^{\circ}1$, $5^{\circ}4$, and $2^{\circ}0$ lower than in 1881, 1880, and 1879, respectively, and colder than any September back to 1877, when it was $52^{\circ}9$.

The mean temperature for the quarter was $58^{\circ}1$, being $1^{\circ}6$ and $2^{\circ}1$ below the average of 111 years and 41 years, respectively.

The mean high day temperature of the air in July was $71^{\circ}1$, being $3^{\circ}2$ below the average of 41 years; in August it was $70^{\circ}5$, being $2^{\circ}4$ below the average, and in September it was $64^{\circ}0$, being $3^{\circ}5$ below the average.

The mean low night temperature of the air in July was $52^{\circ}5$, being $0^{\circ}7$ below its average; in August it was $51^{\circ}7$, being $1^{\circ}5$ below its average, and in September it was $46^{\circ}6$, being $2^{\circ}6$ below its average; therefore both the days and nights have been cold throughout the quarter.

The mean daily range of temperature in July was $2^{\circ}4$ smaller than the average, and in August and September, it was $0^{\circ}9$ smaller than the average.

The mean temperature of the air in July was $3^{\circ}9$ higher than in June, in August it was $0^{\circ}8$ lower than in July, in September it was $5^{\circ}3$ lower than in August.

(From the preceding 41 years observations the increase of temperature from June to July is $3^{\circ}3$, the decrease from July to August is $0^{\circ}7$, and the decrease from August to September is $4^{\circ}4$.)

From June to July at stations south of 51° , there was a mean increase of $2^{\circ}8$ of temperature; and the mean increase north of that parallel was $4^{\circ}0$; from July to August at stations

south of 51° there was a further increase of $1^{\circ} \cdot 3$, but at stations north of 52° , the mean temperature of July and August was nearly the same; from August to September there was a decrease of temperature nearly the same at all stations to the mean value of $4^{\circ} \cdot 7$.

About London the mean daily pressure of the atmosphere till July 3rd was above the average by $0 \cdot 12$ in.; from the 4th to the 18th it was below by $0 \cdot 33$ in.; then for three days it was above by $0 \cdot 11$ in.; it was four days $0 \cdot 15$ in. below; from July 26th to August 11th, it was above the average by $0 \cdot 29$ in., and for the 23 days ending September 3rd, there was an average daily deficiency of $0 \cdot 24$ in. this was followed by six days of an excess of pressure averaging $0 \cdot 18$ in. daily, and then to the end of the quarter there was a daily deficiency of $0 \cdot 22$ in.

The mean reading of the barometer for the month of July at the height of 159 feet above the sea was $29 \cdot 700$ in., being $0 \cdot 099$ in. below the average of 41 years; it was $0 \cdot 125$ in. below that of 1881; and $0 \cdot 027$ in. below that of 1880.

The mean reading of the barometer in August was $29 \cdot 740$ in. being $0 \cdot 042$ in. below the average in 41 years; it was $0 \cdot 064$ in. above that of 1881, and $0 \cdot 078$ in. below that of 1880.

The mean reading of the barometer in September was $29 \cdot 689$ in. being $0 \cdot 117$ in. below the average of 41 years; it was $0 \cdot 114$ in. below that of 1881, and $0 \cdot 118$ in. below that of 1880.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies above the average, and that the minus sign (−) signifies below the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follow:—

Direction of Wind.	JUNE.			AUGUST.			SEPTEMBER.		
	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.
	d.	d.	d.	d.	d.	d.	d.	d.	d.
N.W.	1½	2½	-1½	4½	2½	+ 2	6	2	+ 4
N.	1	3½	-2½	4½	3½	+ 1	3½	4½	- 1
N.E.	0	3½	-3½	3½	3½	- 0	3	5½	-2½
E.	0	1½	-1½	3	1½	+1½	3½	2½	+1½
S.E.	0	1	-1	2½	1½	-1½	1½	2	- ½
S.	8	3	+5	1½	3½	-2½	5	3	+2
S.W.	13½	11	+2½	10	10½	- ½	6	8	-2
W.	7½	4½	+3	7½	4½	+3	1½	3	-1½

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of July are opposite to S., S.W. and W.; in August to N.W. and W.; and in September to N. and S.

The minus sign (−) denotes deficiencies below averages. In July the largest numbers are opposite to N. and N.E.; in August to N.E. and S.; and in September to N.E. and S.W.

The atmospheric pressure in July was 0.035 in. below that of June, that in August was 0.040 in. above that of July, and that in September was 0.053 in. lower than in August.

(From the preceding 41 years observations the mean pressure in July is 0.007 in. below that in June; in August is 0.017 in. below that in July, and September is 0.022 in. above that in August.)

From June to July there was a decrease of pressure, at all stations; at those south of 51° and north 53° , of 0.07 in., and of 0.04 in. at those between these parallels; from July to August there was an increase of 0.09 in. south of 51° and north of 53° , and of 0.05 between 51° and 53° ; and from August to September there was a decrease of 0.08 in. at southern stations decreasing gradually to 0.01 in. at northern stations.

Thunderstorms occurred in July on the 7th at Royston, Somerleyton, and Lowestoft; on the 8th at Oxford, Royston, Cambridge, Wolverhampton, and Liverpool; on the 10th at Whitechurch, Oxford, Somerleyton, and Lowestoft; on the 24th at Royston, Lowestoft, and Cambridge; and on the 25th at Osborne, Salisbury, and Wolverhampton.

In August on the 12th at Plymouth, Totnes, Torquay, Osborne, Salisbury, Bath, Marlborough, and Wolverhampton; on the 13th at Bath, Liverpool, Llandudno, and Bradford; on the 14th at Halifax; on the 15th at Rugby; on the 19th at Somerleyton; and on the 25th and 30th at Cardington.

In September on the 1st at Plymouth; on the 2nd at Truro; on the 3rd at Leicester and Wolverhampton; on the 12th at Truro; on the 13th and 14th at Guernsey; on the 14th at Osborne and Bournemouth; on the 26th at Halifax and Bradford; and on the 27th at Bradford and Leeds.

Thunder was heard but lightning was not seen in July on the 1st at Wolverhampton; on the 2nd at Salisbury, Whitechurch, and Wolverhampton; on the 5th at Oxford; on the 6th at Somerleyton, Cambridge, and Liverpool; on the 7th at Barnet, Lowestoft, Cambridge, and Liverpool; on the 8th at Oxford, Somerleyton, and Cambridge; on the 9th at Somerleyton, Lowestoft, and Cambridge; on the 10th at Lowestoft and Wolverhampton; on the 11th at Oxford, and Cambridge; on the 12th at Cambridge; on the 24th at Salisbury, Strathfield Turgiss, Oxford, and Barnet; on the 25th at Oxford.

In August on the 9th at Rugby; on the 11th at Whitechurch; on the 13th at Somerleyton, Rugby, Bolton, and Carlisle; on the 14th at Somerleyton, Cambridge, Llandudno, and Carlisle; on the 25th at Rugby and Cambridge; and on the 30th at Somerleyton.

In September on the 11th at Strathfield Turgiss; on the 12th at Salisbury and Whitechurch; on the 14th at Torquay and Cambridge; and on the 27th at Burslem and Halifax.

Lightning was seen but thunder was not heard in July, on the 11th at Cambridge; and on the 30th at Whitechurch.

In August, on the 11th at Whitechurch; on the 12th at Torquay, Barnet, and Cambridge; on the 13th at Truro, Torquay and Whitechurch; on the 16th at Carlisle; on the 20th at Oxford; and on the 25th at Marlborough.

In September, on the 12th at Guernsey, Plymouth, Totnes, Torquay, and Marlborough; on the 13th at Plymouth, Totnes, Torquay, Ventnor, Bournemouth, Strathfield Turgiss, Salisbury, Barnet, and Oxford; on the 14th at Plymouth, Totnes, Salisbury, Barnet, and Cambridge; on the 24th at Guernsey.

Solar halos were seen in July, on the 1st at Barnet; on the 12th, 19th, and 22nd at Oxford; and on the 7th and 31st at Bernerside.

In August on the 13th at Oxford; and on the 30th at Torquay.

In September on the 6th at Strathfield Turgiss and Halifax; on the 8th, 10th, and 13th at Halifax; on the 17th at Torquay and Oxford; and on the 19th, 28th, and 29th at Torquay.

Lunar halos were seen in August on the 31st at Oxford.

In September, on the 25th at Oxford; on the 26th at Torquay and Oxford; on the 28th at Cambridge; and on the 29th at Oxford.

Hail fell in July on the 6th at Lowestoft; on the 7th at Royston and Lowestoft; on the 10th at Whitechurch and Oxford; on the 20th at Liverpool; and on the 25th at Osborne.

In August on the 13th and 24th at Llandudno, and on the 29th at Barnet.

In September on the 12th at Guernsey and Truro; on the 13th at Truro and Torquay; and on the 27th at Torquay.

Fog prevailed in July on the 1st, 2nd, and 28th at Guernsey, on the 29th at Guernsey, Strathfield Turgiss, Whitechurch, Oxford, and Cambridge; and on the 30th at Guernsey.

In August on the 1st at Bath, on the 8th at Marlborough and Bolton; on the 9th at Totnes and Bath; on the 10th at Bath; on the 11th at Cambridge; on the 12th at Torquay, Bath, Marlborough, and Cardington; on the 13th at Cambridge; on the 17th and 18th at Torquay; and on the 19th at Bath.

In September on the 1st at Torquay and Wolverhampton; on the 4th, 6th, and 7th at Leicester; on the 8th at Cambridge; on the 10th at Oxford, Royston, Cambridge, Leicester, and Wolverhampton; on the 11th at Cambridge and Bolton; on the 12th and 13th at Bolton; on the 14th at Oxford; on the 15th at Strathfield Turgiss, Oxford, Cambridge, Leicester, Wolverhampton, and Bolton; on the 16th at Oxford, Cambridge, and Leicester; on the 17th at Whitechurch, Oxford, and Cambridge; on the 19th at Whitechurch and Wolverhampton; on the 22nd at Bolton; on the 23rd, 25th, and 26th at Totnes; on the 26th at Cambridge; on the 27th at Wolverhampton; and on the 29th at Bolton.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING SEPTEMBER 30TH, 1882.

The Observations have been reduced to Mean values by Glashier's Barometrical and Diurnal Rangs Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

Year 1882.	Months.	Names of Stations and Observers.	Height of Station Above Sea Level.	Pressure of Air in Month.				Mean Temperature.	Vapour.		Mean Reading of Thermometer.	Wind.			Mean Amount of Cloud.	Rain.
				Mean.	Range.	Highest.	Lowest.	Range.	Of all Highest.	Of all Lowest.	Mean.	Elastic Force.	In a cubic foot of Air.	Mean Weight of a cubic foot of Air.	Mean Amount of Rain.	Number of Days it fell.

The highest temperatures of the air were at Cambridge, 86°; at Osborne, 84° 9; and at Strathfield Turgiss, 85° 2, and there were in August.

The lowest temperatures of the air were at Salisbury, 80°; at Totnes, 80° 4; and at Hull, 81° 2.

The greatest daily

INDEX OF SUPERINTENDENT REGISTRARS' DISTRICTS.

The following Index furnishes a reference to the *Number** of each SUPERINTENDENT REGISTRAR'S DISTRICT. In forming the alphabetical arrangement, the principle adopted has been to place compound names in the order in which they are pronounced.

[illegible]

* Registration Districts were renumbered on 1st January 1881.

QUARTERLY RETURN

OF

MARRIAGES, BIRTHS, AND DEATHS

REGISTERED IN THE DIVISIONS, COUNTIES, AND DISTRICTS OF

ENGLAND;

WITH CERTAIN DETAILED INFORMATION RELATING TO THE DEATHS IN EACH
REGISTRATION SUB-DISTRICT.

By Authority of the Registrar General.

PUBLISHED BY EYRE AND SPOTTISWOODE, 9, EAST HARDING ST., FETTER LANE, E.C.

No. 136.] **Marriages**—*July, August, September, 1882.*
Births and Deaths—*October, November, December, 1882.* [Price 9d.]

*General Register Office, Somerset House,
31st January, 1883.*

The resident POPULATION of the UNITED KINGDOM in the middle of 1882 is estimated at 35,280,299 persons; that of England and Wales at 26,406,820, of Scotland at 3,785,400, and of Ireland at 5,088,079.

In the United Kingdom the *births* of 276,474 children, and the *deaths* of 175,425 persons, were registered in the three months ending 31st December 1882. The recorded natural increase of population was thus 101,049. The registered number of persons married in the quarter ending 30th September 1882 was 123,380.

The birth-rate in the United Kingdom in the fourth quarter of 1882 was 31·1 per 1000, and the death-rate 19·7. The marriage-rate in the third quarter of 1882 was 13·9 per 1000.

The several facts concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars General of those parts of the United Kingdom.

ENGLAND.

This Return comprises the BIRTHS and DEATHS registered in the 2162 registration sub-districts of England and Wales during the quarter ending 31st December 1882; and the MARRIAGES in 14,612 churches or chapels, in 8960 registered places of worship unconnected with the Established Church, and in 630 Superintendent Registrars' Offices, in the three months ending 30th September 1882.

Marriages.

During the three months ending September last, the marriages of 101,978 persons were registered in England and Wales, corresponding to an annual rate of 15·3 per 1000 of the estimated population in the middle of 1882. This rate, although 0·4 below the mean rate in the corresponding quarters of the ten years 1872–81, showed a further increase upon the low rates in recent corresponding quarters, and was higher than the recorded rate in the third or summer quarter of any year since 1877. The annual marriage-rate in the third quarter of last year ranged in the several English counties from 9·8 in Westmorland, 10·1 in Herefordshire, and 10·5 in Shropshire, to 16·3 in Durham and Northumberland, 17·0 in Nottinghamshire, and 18·0 in Lancashire. Compared with the previous corresponding quarter, the

marriage-rate in the three months ending September last showed the largest proportional recovery in Dorsetshire, Shropshire, Staffordshire, Leicestershire, and Cumberland.

Births.

The births registered in England and Wales during the three months ending December last were 217,591, and only 669 above the number returned in the corresponding period of 1881. The annual birth-rate was equal to 32·7 per 1000 of the estimated population, and was 1·7 below the mean rate in the ten preceding corresponding quarters. The birth-rate last quarter was lower than that recorded in the fourth quarter of any year since 1861, excepting only 1880, when the rate was but 32·1. The lowest county birth-rates last quarter were 26·2 in Herefordshire, 26·5 in Huntingdonshire, and 26·9 in Oxfordshire; the rates in the other counties ranged upwards to 35·4 in Nottinghamshire, 36·7 in Staffordshire, and 38·2 in Durham.

In the twenty-eight great towns the birth-rate last quarter averaged 34·8 per 1000, and was 2·1 above the general English rate. The rate was 34·2 in London, and averaged 35·3 in the twenty-seven provincial towns. In these provincial towns the rates ranged from 29·1 in Brighton, 29·3 in Huddersfield, and 30·8 in Halifax, to 38·6 in Cardiff, and 39·8 in Sunderland. In fifty other large town districts the birth-rate averaged 34·5, and was 0·3 below the mean rate in the larger towns; the lowest rates in these districts were 23·7 in Hastings, 26·1 in Cheltenham, and 26·2 in Bath, while the highest were 42·5 in St. Helens, and 42·7 in Wigan and in Middlesbrough.

Movement of the Population.

The *natural* increase of the population of England and Wales, or the excess of births over deaths, which had been 81,771 and 94,314 in the fourth or December quarters of 1880 and 1881, was 84,324 in the corresponding period of last year. It appears from returns issued by the Board of Trade that 59,274 emigrants embarked during last quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing 1320 whose nationality was undistinguished, and excluding 12,151 foreigners, the emigrants of British origin were 47,123, including 33,226 English, 5,413 Scotch, and 8,484 Irish; in the three preceding corresponding quarters the numbers of British emigrants were 44,055, 37,440, and 48,587, respectively. The proportions of emigrants last quarter to a million of the population in the three divisions of the United Kingdom were 1258 from England, 1430 from Scotland, and 1667 from Ireland. Compared with the corresponding quarter of 1881, the proportion of emigration showed a decline in England and in Scotland, whereas it had slightly increased in Ireland.

Prices and Pauperism.

The average price of wheat during last quarter was 40s. 8d., and was 6s. 7d. below that which prevailed in the preceding three months; it was lower than the mean price in the last quarter of any year since 1878, when it was 40s. 2d. The mean wholesale price of beef and of mutton last quarter was 6½d. and 7½d., respectively; the mean price of beef was ¾d. below, and that of mutton ½d. above, the mean prices prevailing in the three preceding months. The average price of the best sea-borne coal in the London market, put in barge from the collier in the Thames, was 17s. 2d. per ton, showed a further increase upon the mean prices in the two preceding quarters, but corresponded with that which prevailed in the fourth quarter of 1881. The mean price of Consols was 101l. 12s. 6d., showing an increase of 1l. 15s. upon the mean price during the preceding three months. The minimum annual rate of discount charged at the Bank of England, which was

raised to 5*l*. on the 14th of September, was so maintained throughout the quarter ending December last.

The average number of paupers (exclusive of lunatics in asylums, and vagrants), relieved in England and Wales on the last day of each week in the quarter was 714,615, of whom 180,228 received in-door and 534,387 out-door relief. The proportion of the population in receipt of pauper relief during the three months ending December was equal to 27·1 per 1000, against 28·3 and 27·5 in the two preceding corresponding quarters; in the fourth quarter of 1870 the proportion of paupers was 42·4 per 1000. Compared with the fourth quarters of 1880 and 1881, the proportion of pauperism last quarter showed a further decline of 1·5 per cent. During last quarter 25·2 per cent. of the total paupers were in receipt of in-door relief, whereas in the corresponding period of 1871 the proportion of in-door to total paupers did not exceed 15·7 per cent.

Meteorology.

The remarks upon the Meteorology of the quarter, at the Royal Greenwich Observatory, furnished by Mr. James Glaisher, F.R.S., will be found with accompanying tables on pages 65-72. The mean reading of the barometer was 29·560 inches, and was 0·191 below the mean reading for the corresponding periods in 41 years; the mean reading for each month was below the average, the largest deficiency occurring in December. The mean temperature of the air in the quarter was 44°·8, and was 1°·2 above the average for the corresponding period in 111 years. From 15th October to 10th November, and the first half of December were cold; with these exceptions, the temperature during the quarter, for the most part exceeded the average. The excess of the monthly mean temperature was equal to 1°·3 in October, 1°·2 in November, and 1°·0 in December. At 37 stations of observation the mean temperature of the quarter ranged from 41°·4 at Wolverhampton and Halifax, to 48°·4 at Ventnor, and 48°·5 in Guernsey.

The amount of rain measured at Greenwich during the quarter was 9·39 inches, and was two and a quarter inches above the average amount in the corresponding periods of 66 years. The rainfall in October was equal to 5·42 inches, and 2·62 above the average; whereas the amounts measured in November and in December were both slightly below the average. Rain was measured at Greenwich on 23 days in October, 19 in November, and 17 in December; in all, on 59 of the 92 days in the quarter. At 37 stations of observation the recorded rainfall ranged from 9·21 inches at Barnet, to 22·10 inches at Barnstaple.

The number of hours of bright sunshine recorded at Greenwich during the quarter was 134·3, and was 24·6 below the average number recorded in the five preceding corresponding periods.

State of the Public Health; Deaths.

During last quarter 133,267 deaths were registered in England and Wales, and were equal to an annual rate of 20·0 per 1000 of the estimated population. This death-rate was 0·9 below the mean rate in the ten preceding corresponding quarters, but exceeded by 1·3 the exceptionally low rate in the fourth quarter of 1881. The rates in the several English counties ranged from 15·2 in Dorsetshire, 15·3 in Sussex, and 15·7 in Huntingdonshire, to 22·2 in Durham, 22·9 in Monmouthshire, and 23·3 in Lancashire. Compared with the county rates in the fourth quarter of 1881, those last quarter showed the largest increase in Berkshire, Cornwall, Lincolnshire, Derbyshire, Durham, Northumberland, and Westmorland.

The 133,267 deaths last quarter included 68,393 of males, and 64,874 of females; the annual death-rate among males was 21·1, and among females 19·0, per 1000 estimated to be living of each sex. In equal numbers living, the deaths were 111 of males to 100 of females; the proportional excess of male mortality was smaller than in the corresponding quarter of 1881, when the deaths of males were as 112 to 100 deaths of females.

URBAN AND RURAL MORTALITY.—In the registration districts and sub-districts comprising the chief towns (see Table III.) and containing an estimated population of fifteen and a half millions of persons, the death-rate was equal to 21·7 per 1000; in the remaining and chiefly rural population of about ten and a half millions of persons, the rate did not exceed 17·5. These urban and rural rates were respectively 1·3 and 0·5 below the average rates in the ten preceding corresponding quarters; they were, however, 1·2 and 1·6, respectively, above the exceptionally low rates that prevailed in the fourth quarter of 1881. In equal numbers living, the deaths were 124 in the urban to 100 in the rural population, against an average proportion of 128 to 100 in the ten preceding corresponding quarters. The excess of urban compared with rural mortality last quarter was, therefore, below the average.

In the twenty-eight great towns, including London, and having an estimated population (in the middle of 1882) of nearly eight and a half millions of persons, the death-rate was equal 22·9 per 1000, and was 1·2 above the general urban rate. The death-rate did not exceed 21·8 in London, whereas it averaged 23·9 in the twenty-seven provincial towns, among which it ranged from 18·1 in Brighton and 19·0 in Bristol, to 29·1 in Preston, 29·3 in Liverpool, and 32·5 in Sunderland. In fifty other large town districts, with an aggregate population estimated at rather more than two and a half millions of persons, the mean death-rate was 21·1, and was 1·8 below the average rate in the twenty-eight great towns. The lowest rates among these fifty towns were 13·9 in Burton-upon-Trent, 14·6 in Barrow-in-Furness, 14·7 in Hastings, and 15·1 in Darlington; the highest rates 25·6 in Macclesfield, 26·5 in Gloucester and in Wigan, and 28·5 in Stoke-upon-Trent.

MORTALITY AT DIFFERENT AGES.—The 133,267 deaths last quarter included 31,460 of infants under one year of age, 66,618 of children and adults aged between one and 60 years, and 35,189 of persons aged upwards of 60 years.

The rate of infant mortality, measured by the proportion of deaths under one year to births registered, was equal to 145 per 1000; in the ten preceding corresponding quarters the proportion of infant mortality averaged 143 per 1000, and ranged from 154 in 1874 to 129 in 1881. The lowest county rates of infant mortality last quarter were 74 in Huntingdonshire and Rutlandshire, 84 in Dorsetshire, and 98 in Wiltshire; the highest were 164 in Monmouthshire, 165 in Staffordshire, 171 in Lancashire, and 173 in the West Riding of Yorkshire. In the twenty-eight great towns the proportion of infant mortality averaged 161 per 1000, and exceeded the general English rate by 16. While the rate did not exceed 147 in London, it averaged 172 in the twenty-seven provincial towns, among which it ranged from 123 in Wolverhampton and 125 in Brighton, to 207 in Huddersfield, 208 in Oldham and in Cardiff, and 213 in Leeds. In the fifty other town districts infant mortality averaged 156 per 1000 births; while the proportion was but 95 in Cambridge, 98 in Carlisle, and 100 in Darlington, it ranged upwards to 200 in Dudley, 216 in Ystradyfodwg, and 245 in Stoke-upon-Trent.

Among persons aged between one and 60 years the annual rate of mortality was equal to 11·2 per 1000 persons estimated to be living at these ages, against an average of 11·9 in the ten preceding corresponding quarters. In the twenty-eight great towns the death-rate at these ages averaged 13·8 per 1000, ranging from 9·3 and 9·9 in Brighton and Norwich, to 17·2 in Preston, 19·2 in Liverpool, and 22·7 in Sunderland.

The annual rate among persons aged upwards of 60 years averaged 70·7 per 1000, and was 1·0 below the mean rate at these ages in the ten preceding fourth quarters of 1872-81. The death-rate at these ages in the twenty-eight towns averaged 81·2 per 1000, and was 10·5 above the average rate. In London this rate was equal to 77·7, while it averaged 84·6 in the twenty-seven provincial towns, and ranged from 60·3 and 68·9 in Nottingham and Derby, to 98·5 in Liverpool, 104·6 in Halifax, and 112·8 in Preston.

The rate of mortality at all ages last quarter was 4·3 per cent. below the mean rate in the ten preceding corresponding quarters; the death-rate among infants

showed an excess of 1·4 per cent., while that among children and adults aged between one and 20 years was 5·9, and among persons aged upwards of 60 years was 1·4 per cent., below the average for the same period.

ZYMOTIC DISEASES.—The 133,267 deaths from all causes included—

4053	attributed to scarlet fever.
2814	„ diarrhoea.
2774	„ measles.
2525	„ fever.
2431	„ whooping-cough.
1002	„ diphtheria.
190	„ small-pox.

Thus the total number of deaths ascribed to these causes was 15,789, corresponding to an annual rate of 2·37 per 1000, against an average rate of 2·93 for the ten preceding fourth quarters.

The lowest county rates from these causes were 0·77 in Wiltshire, 0·86 in Rutlandshire, and 0·98 in Huntingdonshire, while the highest were 3·78 in Durham, and 3·86 in Monmouthshire. In the twenty-eight great towns the rate averaged 2·97, varying from 1·15 in Huddersfield, 1·21 in Brighton, and 1·31 in Wolverhampton, to 4·56 in Preston, 4·78 in Liverpool, and 8·93 in Sunderland. In fifty other considerable towns the rate averaged 2·66, rising, however, to 6·97 in Reading, 7·96 in Accrington, and 9·69 in Gloucester. In the remainder of England and Wales, after subtracting the seventy-eight towns, the rate was 2·00.

The deaths from *scarlet fever* numbered 4053, corresponding to an annual rate of 0·61 per 1000, against an average of 0·92 for the ten preceding fourth quarters. The fourth quarter is the one in which almost invariably scarlet fever is at its maximum, and 1882 gave no exception to the rule, the rate having been higher in this fourth quarter than in any of the preceding three quarters. It was, however, lower than in any one of the corresponding quarters of the last ten years.

The rate varied in the English counties from 0·03 in Wiltshire, to 1·64 in Lincolnshire, and 2·32 in Monmouthshire. In the twenty-eight great towns the rate averaged 0·72, varying from 0·08 in Bolton and 0·09 in Norwich, to 1·00 in Leeds, 1·34 in Sheffield, and 1·48 in Sunderland. In fifty other considerable towns the rate averaged 0·84, rising, however, to 1·45 in Stoke-upon-Trent, 2·07 in Carlisle, 2·87 in Lincoln, 4·51 in Macclesfield, 6·99 in Accrington, and 8·55 in Gloucester. Excessive rates of mortality from this disease were also recorded in Burnham, Barrow-upon-Soar, Melton Mowbray, Donington, Gainsborough, Sutton-in-Ashfield, Anston, Crowle, Alnwick, Aberystroth, Gelligaer, and Llangattock registration sub-districts.

The deaths from *diarrhoea* numbered 2814, giving an annual rate of 0·41 per 1000, against an average rate of 0·54 for the ten preceding fourth quarters.

The highest county rates were 0·62 in Staffordshire, and 0·64 in Warwickshire and in Lancashire. In the twenty-eight great towns the rate averaged 0·46, rising, however, to 1·36 in Blackburn, and 1·80 in Preston. In fifty other considerable towns the rate averaged 0·48, but was 1·05 in Maidstone, 1·13 in Stoke-upon-Trent, and 1·23 in Worcester.

The deaths from *measles* numbered 2774, corresponding to an annual rate of 0·42 per 1000, against an average rate of 0·37 for the ten preceding fourth quarters.

No death from this disease was registered in Oxfordshire, Huntingdonshire, or Dorsetshire, while in Northamptonshire the rate was 0·81, in Berkshire 0·87, and in Durham 1·02. In the twenty-eight great towns the rate averaged 0·62; but, while no death was ascribed to this disease in Brighton, the rate was 1·01 in Hull, and 1·39 in Cardiff. In fifty other considerable towns the rate averaged 0·39, but was 1·06 in Stoke-upon-Trent, 1·16 in Lincoln, 2·54 in Merthyr Tydfil, and 3·44 in Reading. The disease also showed fatal prevalence in the following registration sub-districts: Chertsey, Rickmansworth, Tring, Rothwell, Runcorn, and Nantwich.

The deaths ascribed to *fever*, including typhus, enteric fever, and also simple continued and ill-defined forms of fever, numbered 2525, corresponding to an annual rate of 0·38 per 1000, against an average rate of 0·51 for the ten preceding fourth quarters.

In the little county of Rutland no death was ascribed to this cause, while in the remainder it varied from 0·07 in Herefordshire, and 0·10 in Cambridgeshire and in Somersetshire, to 0·65 in Lancashire, 0·66 in Durham, and 0·67 in Northumberland. In the twenty-eight great towns the rate averaged 0·53, varying from 0·09 in Norwich, 0·10 in Wolverhampton, and 0·11 in Bolton, to 1·21 in Sunderland, 1·61 in Portsmouth, and 1·68 in Liverpool. In fifty other considerable towns the rate averaged 0·36, but rose to 0·70 in Gateshead, 0·71 in Stockport, 0·72 in Bury, and 0·75 in St. Helens. The deaths referred to "fever" in Bangor sub-district, which had been 43 in the three months ending September last, declined to 17 in the last quarter of the year, of which 12 were registered in October.

The deaths from *whooping-cough* numbered 2431, corresponding to an annual rate of 0·37, against an average rate of 0·38 for the ten preceding fourth quarters.

No death was ascribed to this disease either in Huntingdonshire or in Rutlandshire, while the rate was 0·06 in Shropshire, and 0·79 in Berkshire. In the twenty-eight great towns the rate averaged 0·44, varying from 0·05 in Huddersfield, to 0·91 in Birkenhead, and 1·56 in Preston. In fifty other considerable towns the rate averaged 0·46, but was 1·21 in Warrington, 2·56 in Reading, and 2·90 in Dudley. In the rest of England and Wales, that is excluding the seventy-eight towns, the rate was 0·31, but the mortality from the disease was excessive in Ramsgate, Louth, Todmorden, Ardsley, Ormesby, Whitehaven, and Llanrug sub-districts.

The deaths returned as due to *diphtheria* were 1001, corresponding to an annual rate of 0·15 per 1000, against an average rate of 0·13 for the ten preceding fourth quarters.

The highest county rates from this very imperfectly returned disease were 0·33 in Cambridgeshire and in Essex, 0·34 in Nottinghamshire, and 0·46 in Shropshire. In the twenty-eight great towns the rate averaged 0·16, or much the same as in the country at large. No death from it was registered in Brighton, Norwich, Wolverhampton, or Preston, while the rate was 0·24 in London, and 0·44 in Sunderland. In the fifty other considerable towns the mean rate was 0·09, while it was equal to 0·40 in Merthyr Tydfil, and 0·49 in Devonport. Local outbreaks of the disease were also reported in the following sub-districts: Westbourne, Wiggshall, Madeley, and Sutton-in-Ashfield. In the last-mentioned sub-district, which had a population of 12,957 persons in 1881, 14 fatal cases of diphtheria were registered, in addition to 19 of scarlet fever.

The deaths from *small-pox* numbered 190, and were fewer than in any quarter since that ending with September 1880.

Of these 190 deaths, 38 occurred in London, 65 in Staffordshire, and 40 in Northumberland, giving annual rates of 0·04, 0·25, and 0·36 respectively. The 65 fatal cases in Staffordshire included 23 in West Bromwich, 9 in Walsall, 11 in Wolverhampton, 12 in Dudley, and 8 in Newcastle-under-Lyme registration districts. Of the 40 in Northumberland, 34 occurred in Newcastle-upon-Tyne, and 4 in Alnwick; and of the 19 in Durham, 15 were returned in Gateshead.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in the twenty-eight great towns, in fifty other large town districts, and in the rest, or comparatively rural part, of England and Wales:—

ANNUAL DEATH-RATE per 1,000 from several ZYMOTIC DISEASES during the Fourth Quarter
of 1882.

	From Diseases in Cols. 2-8.	Small- pox.	Measles.	Scarlet Fever.	Diph- theria.	Whoop- ing- cough.	Fever.	Diar- rhoea.
Cols.	1.	2.	3.	4.	5.	6.	7.	8.
England and Wales -	2.37	0.03	0.42	0.61	0.15	0.37	0.38	0.41
28 Great Towns -	2.97	0.04	0.62	0.72	0.16	0.44	0.53	0.46
50 other Towns -	2.66	0.04	0.39	0.84	0.09	0.46	0.36	0.43
England and Wales, less the 78 Towns -	2.00	0.02	0.31	0.51	0.16	0.31	0.30	0.39

CERTIFICATION OF CAUSES OF DEATH.—The causes of 120,480, or 90.4 per cent. of the 133,267 deaths registered in England and Wales last quarter were certified by registered medical practitioners in attendance during the last illness, and 7141, or 5.4 per cent., by coroners in inquest cases. The causes of the remaining 5646, or 4.2 per cent., of the deaths were uncertified. The proportion of uncertified deaths showed a further increase upon the proportions recorded in the two preceding quarters of the year; it was only 1.3 per cent. in London, but averaged 4.8 per cent. in the rest of England and Wales. While the percentage of uncertified deaths did not exceed 1.6 in the extra-metropolitan portion of Middlesex, in Wiltshire, and in Berkshire, it ranged upwards to 6.7 in Huntingdonshire, 7.8 in Durham, and 8.0 in Cornwall. In Wales 11.0 per cent. of the causes of death were uncertified; the proportion was 10.5 in South Wales, and 11.9 in North Wales.

In the twenty-eight great towns the proportion of uncertified deaths averaged 2.7 per cent.; it did not exceed (as above-mentioned) 1.3 in London, but averaged 3.9 in the twenty-seven provincial towns. The percentage in these provincial towns ranged from 0.6 in Portsmouth, and 1.4 in Birmingham and Derby, to 7.8 in Oldham, 7.9 in Wolverhampton, and 9.4 in Halifax. The proportion in Wolverhampton showed a decline from the high proportion in the preceding quarter.

VIOLENT DEATHS.—The deaths referred last quarter to different forms of violence were 4208; they were equal to an annual rate of 0.63 per 1000 of the estimated population, and to 3.2 per cent. of the total deaths. The death-rate from violence in the various counties ranged from 0.28 in Oxford and 0.38 in Surrey (extra-metropolitan), and in Worcester, to 0.91 in Monmouthshire, 0.98 in Huntingdonshire, and 1.02 in Derbyshire. In the twenty-eight great towns the deaths from violence were equal to an annual rate of 0.74 per 1000; the rates in the several towns ranged from 0.11 in Halifax, and 0.27 in Norwich, to 1.01 in Hull, 1.09 in Birmingham, and 1.27 in Liverpool.

INQUESTS.—During last quarter 7141 inquest cases were registered, equal to 5.4 per cent. of the total deaths; this slightly exceeded the mean proportion in the ten preceding corresponding quarters. The proportion of inquests in the twenty-eight towns averaged 6.3 per cent.; while the proportions were but 1.6 in Preston and 1.8 in Halifax, they ranged upwards in the other towns to 8.1 in Wolverhampton and in Leicester, 8.3 in Manchester, and 8.8 in Birmingham.

DEATHS IN PUBLIC INSTITUTIONS.—The deaths recorded last quarter in work-houses, in hospitals, and in public lunatic asylums were 13,708, and equal to 10.3 per cent. of the total deaths; this proportion was 1.0 in excess of the mean percentage in the fourth quarters of the ten years 1872-81. In the twenty-eight

great towns 7.407, or 15.3 per cent., of the total deaths were recorded in the principal public institutions. The percentage of deaths in institutions did not exceed 6.9 in Preston and 7.1 in Oldham, whereas it ranged upwards in the other towns to 17.9 in Liverpool, 19.2 in London, and 19.6 in Wolverhampton. The proportion of deaths in institutions, which averaged 15.3 per cent. in the twenty-eight towns, did not average more than 7.4 per cent. in the rest of England and Wales.

HEALTH OF FOREIGN AND COLONIAL CITIES.

A summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, shows that the average annual death-rate during the last quarter of 1882 in twenty-nine Colonial and Foreign cities having an aggregate population exceeding fourteen millions of persons, was equal to 25.0 per 1000. In the twenty-two European cities the average rate was 25.0 per 1000, against 22.9 in twenty-eight of the largest English towns. Among the twenty-nine Colonial and Foreign cities the lowest death-rates were 17.3 in Christiania, 20.3 in Brussels, 20.4 in Philadelphia, and 20.5 in Geneva; whereas the rates ranged upwards to 29.6 in Venice, 32.0 in Calcutta, 32.6 in St. Petersburg, and 34.9 in Madras. The deaths from small-pox in Paris, which had been 248 and 120 in the two preceding quarters, further declined last quarter to 101; the fatal cases of typhoid fever, however, which had been 436, 553, and 738 in the first three quarters of the year, further rose during the last three months of 1882 to 1571, and were equal to an annual rate of no less than 2.82, against but 0.38 from the same disease in London. The deaths from both measles and diphtheria showed a further decline from those returned in recent quarters. The deaths referred to small-pox in St. Petersburg, which had been 173 and 162 in the two preceding quarters, rose last quarter to 279, and showed increasing prevalence towards the end of the year. The fatal cases of small-pox in Baltimore were no less than 374, against but 45 and 113 in the two preceding quarters; during the last four weeks of the year as many as 192 deaths resulted from this disease. The fatality of small-pox in Vienna and Buda-Pesth showed a marked decline during the quarter. Diphtheria caused 532 deaths in St. Petersburg, 496 in Berlin, 381 in Philadelphia, and 300 in Baltimore; each number showing a considerable increase upon that returned in the preceding quarter. The deaths referred to typhus and typhoid fever in St. Petersburg, which had been 507 and 217 in the second and third quarters of 1882, were 231 in the last three months of that year, and were equal to an annual rate of 1.04 per 1000, while in London the death-rate from these diseases was but 0.40 per 1000. Typhoid fever was also fatally prevalent in Berlin, Prague, New York, and Philadelphia.

The Year 1882.

During the four quarters of 1882, 888,940 births, and 516,783 deaths were registered in England and Wales. The *natural* increase of population during the year by excess of births over deaths was 372,157, against 353,019 and 391,707 in 1880 and 1881. The estimated increase of population during the year, based upon the rate of increase that prevailed during the decade 1871-81, was 353,784 and 18,373 less than the excess of births over deaths. According to returns issued by the Board of Trade, 272,448 British emigrants (including 163,919 English, 32,566 Scotch, and 75,963 Irish) left the various ports of the United Kingdom, at which emigration officers are stationed, during last year. This number showed a further increase upon the recorded numbers in the five preceding years. Compared with the returns for 1881, the increase of emigration during last year was equal to 16.5 per cent. from England, 19.6 from Scotland, and 8.1 per cent. from Ireland.

The birth-rate in 1882 was equal to 33·7 and the death-rate to 19·6 per 1000 persons estimated to be living in the middle of the year. The birth-rate showed a further slight decline from the steadily decreasing rates in the five preceding years, and was lower than the rate recorded in any year since 1858, when it was also 33·7. The death-rate showed an increase of 0·7 upon the unprecedentedly low rate in 1881, but was, with that single exception, lower than the rate in any year since civil registration was established in 1837. The mean death-rate of the two first years of the current decade 1881-90 was 19·3 per 1000, and 2·1 below the mean rate in the preceding ten years 1871-80, implying that more than 100,000 persons survived the last two years, whose deaths would have been recorded had the average rate of mortality in the preceding decade been maintained.

The 516,783 deaths during 1882 included 125,157 of infants under one year of age, and 129,454 of persons aged upwards of 60 years. The rate of infant mortality, measured by the proportion of deaths under one year to births registered, was equal to 141 per 1000, against 135,153, and 130 in the three preceding years. This proportion of infant mortality averaged 146 per 1000 during the ten years 1872-81. The rate of mortality among persons aged upwards of 60 years during last year did not exceed 65·6 per 1000 persons estimated to be living at these ages, showing a further decline from the rates that prevailed in the three preceding years, which were 77·9, 68·5, and 67·2, respectively.

The deaths from all causes during last year included 16,554 from diarrhœa, 14,431 from whooping-cough, 13,477 from scarlet fever, 12,241 from measles, 7971 from "fever" (typhus, enteric, and simple or ill-defined), 3756 from diphtheria, and 1304 from small-pox. Thus 96,734 deaths were referred to the principal zymotic diseases, and were equal to a rate of 2·64 per 1000, against 3·30 and 2·24 in the two preceding years. The mean annual death-rate from these principal zymotic diseases, which had been 3·87, 4·11, and 3·36 per 1000 respectively in the three decades 1851-60, 1861-70, and 1871-80, did not exceed 2·44 in the first two years of the current decade. Compared with the numbers in 1881, however, the fatal cases of diarrhœa, whooping-cough, measles, "fever," and diphtheria, were more numerous last year, while those of scarlet fever and small-pox showed a decline. The death-rate from "fever" last year was equal to 0·30 per 1000, and showed a slight increase upon the exceptionally low rate (0·27) in 1881; the mean fever-rate for 1881 and 1882, however, did not exceed 0·29, whereas in the three most recent decades it was equal to 0·91, 0·89, and 0·49 per 1000 respectively.

During last year 27,367 inquest cases were registered, equal to 5·3 per cent. of the total deaths; this proportion, although slightly below that which prevailed in 1881, somewhat exceeded the average percentage in recent years. The reported deaths from different forms of violence were 16,965, and 340 fewer than the number is 1881; they were equal to 3·3 per cent. of the deaths from all causes, and to a rate of 0·64 per 1000 of the estimated population.

The foregoing statistics for 1882 are derived from a summary of the Returns furnished to the Registrar General by the 2162 local Registrars at the close of each quarter of the year. The figures are, therefore, subject to revision when the causes of death and other details are finally classified and tabled for publication in the Annual Report for 1882.

PRELIMINARY TABLES.

TABLE I.—Marriages, Births, and Deaths registered in England and Wales in the Years 1872-82, and in each Quarter of those Years.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. These figures are derived from returns which have been supplied by Mr. Richard Meade of the Mining Record Office.

Note.—The letter M or P affixed to the name of each Town denotes whether the limits, which the district or sub-districts named in the last column approximately represent, are Municipal or Parliamentary. Imp† D. signifies an Improvement District, and L. G. D. a Local Government District.

† The rates of mortality for these towns have been corrected by the exclusion of a proportion of the number of deaths occurring in County Hospitals and Lunatic Asylums, situate within the districts or sub-districts here taken as representing the towns, or by the exclusion of a proportion of the deaths in Union Workhouses in cases where only a portion of the town or non is embraced by the area taken, or where the Workhouse is situated outside that area.

Note.—In estimating the population of these Districts, upon which the birth and death-rates have been calculated, it has been assumed that the rate of increase in Greater London since April last has been the same as that which prevailed between 1871 and 1881; the estimate for the Outer Ring is obtained by the deduction of the estimated population of Inner London from that of Greater London. The estimates for the suburban districts have been adjusted to cast to the estimated total of the population of the Outer Ring, obtained in the manner above described. In calculating the rates of mortality for the above Table, a proportion of the deaths recorded in the three Middlesex County Lunatic Asylums, situated in the Districts of Epsom, Uxbridge, and Barnet, has been excluded as belonging to the Middlesex portion of Registration or Inner London, and the remainder distributed among the Middlesex Districts of the Outer Ring.

TABLE IX.—Births and Deaths in the Fourth Quarter of 1882, in 28 Foreign Cities having an estimated aggregate Population of 13,920,613 persons.

^a The Registration or Union Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore differ more or less from the boundaries of Counties (proper).

^b The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

^c See page 14, note b.

NOTE.—The Registrars alone must be considered responsible for the accuracy of the figures shown in their Returns, and for the opinions expressed in the foot notes.

* The Superintendent Registrars' Districts are collections of contiguous Parishes or Places, nearly always identical with the Poor Law Unions of the same names; they are now 630 in number, and are here arranged topographically under the Registration Counties.

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1871. They do not include space occupied by foreshore or tidal water of rivers and creeks.

c See page 14, note b.

The Registration Sub-districts (2162 in number) are sub-divisions of the Superintendent Registrars' Districts in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *v* indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

* For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 30th December.

I.—LONDON.—REGISTRATION SUB-DISTRICTS—continued.

Registration Sub-districts.		Area in Statute Acres.	Enumerated Population, 1881 (unrevised).	Births		Deaths		The DEATHS in the Quarter are stated by the Registrars to include

a 626: 1.—The 4 deaths from diphtheria occurred in or near the village of Llangybi.

b 627: 2.—Of the 6 deaths from diphtheria, 1 occurred in the parish of Llanddeiniolen.

c 628: 2.—Of the 17 deaths from fever, 12 occurred in October, 4 in November, and 1 in December.

d 628: 3.—Of the 6 deaths from fever (typhoid), 5 occurred in Bethesda Urban Sanitary District.

e 629: 1.—On the 1st October the sub-district of *Llechudd Isaf* was united to the sub-district of *Conway*.

f 630: 5.—The 6 deaths from diphtheria occurred in the village of Bodedern.

REMARKS ON THE WEATHER DURING THE QUARTER ENDING DECEMBER 31ST, 1882.

By JAMES GLAISHER, Esq., F.R.S., &c.

The first half of the month of October was warm, and the second half cold. The atmospheric pressure was above its average for the first 10 days, and below it afterwards. The month was wet and unsettled. Rain fell at most stations in the Southern and Midland counties to more than double the average, lowlands were flooded; there was a gale of wind on the 24th, with snow at many places; the fall of rain on this day was heavy and exceeded one inch in depth at several stations.

The month of November was warm during the first 10 days, cold from the 11th to the 21st, then warm and cold alternately. The atmospheric pressure was low throughout the month. Rain fell everywhere in excess of the average; the month was unsettled and changeable, and farm work almost at a standstill owing to the wetness of the land.

December. Till the 15th day the weather was foggy and very cold, at times severely so, snow falling frequently; it was warm from the 16th to the end of the month, remarkably so from the 26th. The atmospheric pressure was almost continuously below the average. The fall of rain was in excess of the average; the month was unsettled, with very little sunshine.

About London till the 15th of October the average daily excess of mean temperature was $2^{\circ}3$; the weather was cold from the 16th to the 30th, the mean daily defect being $1^{\circ}3$. The 11 days to November 10th were warm, being in excess of their average temperature by $3^{\circ}9$ daily; this was followed by a like period of 11 days of cold, the average daily deficiency of mean temperature being $3^{\circ}8$ daily; there were then 5 days of warm weather, the daily excess being $5^{\circ}5$; then for 19 days, from November 27th to December 15th the weather was cold, particularly on the 11th and 12th of December, on which days it was $13^{\circ}9$ and $13^{\circ}3$ below the average; the mean daily deficiency for these 19 days was $5^{\circ}6$. From this time to the end of the year it was warm, and particularly so from December 26th; on December 27th the excess was $15^{\circ}7$, and on the 28th it was $15^{\circ}2$, and the excess for the 6 days was $13^{\circ}\frac{3}{4}$, and for the 16 days ending December 31st it was $6^{\circ}8$.

The mean temperature of the air for October was $50^{\circ}8$, being $1^{\circ}3$ and $0^{\circ}8$ above the average of 111 years and 41 years respectively; it was $5^{\circ}5$ and $4^{\circ}6$ higher than in 1881 and 1880 respectively.

The mean temperature of the air for November was $43^{\circ}5$, being $1^{\circ}2$ above the average of 111 years and the same as the average of 41 years; it was $5^{\circ}2$ lower than in 1881, and $1^{\circ}0$ higher than in 1880.

The mean temperature of the air for December was $40^{\circ}1$, being $1^{\circ}0$ and $0^{\circ}2$ above the averages of 111 years and 41 years respectively; it was $0^{\circ}3$ higher than in 1881 and $3^{\circ}1$ lower than in 1880.

The mean temperature for the quarter was $44^{\circ}8$, being $1^{\circ}2$ above the average of 111 years and $0^{\circ}3$ above the average of 41 years.

The mean high day temperature of the air in October was $57^{\circ}7$, being $0^{\circ}4$ below the average of 41 years; in November it was $48^{\circ}7$, being $0^{\circ}2$ lower than the average, and in December was $44^{\circ}0$, being $0^{\circ}7$ lower than the average. Therefore the high day temperature was low throughout the quarter.

The mean low night temperature of the air in October was $44^{\circ}7$, being $1^{\circ}3$ above average of 41 years; in November it was $38^{\circ}4$, being $1^{\circ}1$ above the average, and in December was $35^{\circ}6$, being $0^{\circ}4$ above the average throughout the quarter. Therefore the low night temperature was high throughout the quarter.

The mean daily range of temperature in October was $1^{\circ}8$ smaller than the average, and in November was $1^{\circ}2$ below the average, and in December it was $1^{\circ}0$ below the average.

The mean temperature of the air in October was $3^{\circ}5$ lower than in September, in November was $7^{\circ}3$ lower than in October, and in December was $3^{\circ}4$ lower than in November. (From the preceding 41 years observations the decrease of temperature from September to October is $7^{\circ}1$; from October to November is $6^{\circ}5$, and from November to December is $3^{\circ}6$.)

From September to October, at stations south of latitude 51° , there was a decrease of 3° of temperature; and north of 51° , a decrease of 4° ; from October to November, at stations south of 51° , there was a decrease of $5^{\circ}8$, between 51° and 52° a decrease of $6^{\circ}9$, between 52° and 53° a decrease of $7^{\circ}6$, between 53° and 54° a decrease of $7^{\circ}8$, and north of 54° a decrease of $8^{\circ}9$; from November to December, at stations south of 51° , there was a decrease of $2^{\circ}7$, gradually increasing in amount to $4^{\circ}3$ at stations north of 54° .

About London the mean daily pressure of the atmosphere till October 10th was above the average by $0^{\circ}29$ in.; and, from October 11th to the end of the year, it was below the average by $0^{\circ}33$ in.

The mean reading of the barometer for the month of October at the height of 159 feet above the sea was $29^{\circ}656$ ins., it being $0^{\circ}053$ in. below the average of 41 years; and $0^{\circ}171$ in. below that of 1881; and $0^{\circ}049$ in. below that of 1880.

The mean reading for November was $29^{\circ}532$ ins., being $0^{\circ}217$ in. below the average of 41 years, and $0^{\circ}253$ in. below that of 1881, and $0^{\circ}261$ in. below that of 1880.

The mean reading for December was $29^{\circ}493$ ins. being $0^{\circ}302$ in. below the average of 41 years, and $0^{\circ}328$ in. below that of 1881, and $0^{\circ}256$ in. below that of 1880.

The atmospheric pressure in October was 0.031 in. below that in September; that in November was 0.124 in. below that in October, and that in December was 0.039 in. below that in November.

(From the preceding 41 years observations the mean pressure in October is 0.095 in. below that in September; that in November 0.040 in. above that in October, and that in December 0.046 in. above that in November.)

From September to October there was a decrease of pressure at all stations of 0.054 in. at those south of 51°; of 0.038 in. between 51° and 52°; and of 0.020 in. at stations north of 52°; from October to November there was a decrease of 0.041 in. at southern stations, increasing gradually to 0.230 in. at northern stations; from November to December there was a decrease of 0.087 in. at stations south of 51°; of 0.049 in. at those between 51° and 52°; of 0.023 in. at those between 53° and 54°; between 53° and 54°, the readings in December were nearly the same as those in November; and north of 54° the readings in December were higher by 0.029 in. than in November.

NOTE.—In reading this table it will be borne in mind that the plus sign (+) signifies *above* the average, and that the minus sign (−) signifies *below* the average.

The average duration of the different directions of the wind referred to eight points of the compass, and the duration of each direction in each month in the quarter, were as follow:—

Direction of Wind.	OCTOBER.			NOVEMBER.			DECEMBER.		
	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.	1882.	Average.	Departure from Average.
N.W.	d. 1½	d. 2½	-1	d. 5½	d. 2½	+ 3	d. 4	d. 2½	+1½
N.	2½	3½	-1	1½	4½	- 2½	1½	3	-1½
N.E.	2½	3	-½	1	4	- 3	1½	2½	-1
E.	6	1½	+4½	1½	2½	- 1	3½	2	+1½
S.E.	2½	2	+½	2	2	- 1½	4½	2	+2½
S.	4	4	0	5½	4	- 1½	3½	3½	0
S.W.	7½	10	-2½	5½	8½	- 2½	8	11	-3
W.	5½	4½	+ 1	13½	2½	+10½	4½	4½	0

The plus sign (+) denotes excesses over averages; the largest numbers affected with this sign in the month of October are opposite to E. and W.; in November to W. and N.W.; and December to S.E., E., and N.W.

The minus sign (−) denotes deficiencies below averages. In October the largest numbers are opposite to S.W., N.W. and N.; in November to S. and N.E.; and in December to S.W. and N.

Thunderstorms occurred in October on the 2nd at Silloth; on the 8th at Torquay, Royston, Cambridge, and Halifax; and on the 24th at Llandudno, and Salisbury.

In November on the 2nd at Silloth; on the 4th at Stonylhurst; on the 7th at Silloth; on the 8th at Burslem, Wolverhampton, Halifax, Stonylhurst, Bradford, and Silloth; on the 9th at Bradford; on the 16th at Torquay; on the 19th at Guernsey; on the 25th at Bolton; on the 26th at Halifax; and on the 27th at Wolverhampton; and none in December.

Thunder was heard but lightning was not seen in October on the 8th at Salisbury and Hull.

In November on the 3rd and 4th at Carlisle; and on the 9th at Rugby.

Lightning was seen but thunder was not heard in October on the 7th at Osborne, Salisbury, Barnet, Oxford, Royston, and Cambridge; on the 8th at Torquay, Barnet, Oxford, and Lowestoft; on the 10th at Guernsey and Cambridge; on the 13th at Royston; on the 22nd at Guernsey, Bolton, Llandudno, and Stonyhurst; and on the 23rd at Bolton.

In November, on the 2nd and 4th at Carlisle; on the 5th at Halifax and Stonyhurst; on the 6th at Carlisle; on the 7th at Oxford and Carlisle; on the 8th at Plymouth, Strathfield Turgiss, Blackheath, Barnet, Oxford, Cambridge, Hull, and Carlisle; on the 9th at Plymouth, Torquay, and Hull; on the 10th at Hull; on the 12th at Stonyhurst; on the 19th at Plymouth; on the 20th at Guernsey and Plymouth; on the 25th at Halifax.

Aurora borealis was seen on the 1st October at Halifax; on the 2nd at Guernsey, Torquay, Oxford, Barnet, Royston, Somerleyton, Cambridge, Leicester, Hull, and Silloth; on the 3rd at Oxford, and Hull; and on the 5th at Stonyhurst and Silloth.

In November on the 1st at Oxford; on the 12th at Stonyhurst and Silloth; on the 13th at Bolton and Stonyhurst; on the 14th at Stonyhurst; on the 17th at Guernsey, Totnes, Torquay, Osborne, Salisbury, Whitechurch, Blackheath, Oxford, Barnet, Royston, Somerleyton, Lowestoft, Cambridge, Halifax, Hull, Stonyhurst, and Silloth; on the 18th at Torquay and Cardington; on the 19th and 20th at Oxford.

In December on the 19th at Oxford; and on the 23rd at Halifax.

Solar halos were seen in October, on the 9th at Torquay and Oxford; and on the 29th at Oxford.

In November on the 2nd at Oxford; on the 3rd and 6th at Halifax; on the 7th at Halifax and Torquay; on the 11th and 16th at Torquay; on the 17th at Oxford; on the 21st at Torquay, Strathfield Turgiss, Oxford, Halifax, and Stonyhurst; on the 25th at Oxford; on the 27th at Torquay; and on the 28th at Halifax, Stonyhurst, and Silloth.

In December on the 1st at Oxford; on the 11th at Torquay; on the 20th at Halifax; and on the 23rd at Torquay.

Lunar halos were seen in October on the 20th at Wolverhampton; on the 23rd at Torquay; on the 24th at Cambridge, Burslem, and Silloth; on the 25th at Bolton and Halifax; on the 29th at Plymouth and Torquay; on the 31st at Oxford.

In November on the 2nd at Oxford; on the 17th at Torquay; on the 19th at Cambridge; on the 20th at Oxford, Lowestoft, and Stonyhurst; on the 21st at Oxford, Lowestoft, and Cambridge; on the 23rd at Halifax; on the 24th at Oxford; and on the 25th at Torquay.

In December on the 16th at Torquay; on the 17th, 19th, and 20th at Oxford; on the 20th at Halifax; on the 21st at Torquay; on the 22nd at Lowestoft and Cambridge; on the 23rd at Torquay, Oxford, Cambridge, and Halifax; and on the 24th at Barnet, Oxford, Lowestoft, and Cambridge.

Snow fell in October on the 16th at Hull; and on the 20th at Salisbury, Oxford, Royston, Cambridge, and Leicester.

In November, on the 8th at Burslem; on the 10th and 11th at Carlisle; on the 15th at Strathfield Turgiss, and Bolton; on the 16th at Osborne, Salisbury, Whitechurch, Blackheath, Barnet, Oxford, Royston, Cardington, and Carlisle; on the 17th at Royston and Lowestoft; on the 18th at Hull; on the 19th at Bolton, Halifax, and Carlisle; on the 20th at Burslem, Cambridge, Bolton, and Halifax; on the 24th at Halifax; on the 25th at Halifax and Bradford; on the 26th at Halifax; on the 27th at Burslem, Halifax, and Bradford; on the 30th at Cambridge.

In December, on the 2nd at Wolverhampton, Oxford, Burslem, Bolton, and Stonyhurst; on the 4th at Burslem, Wolverhampton, Bolton, and Halifax; on the 5th at Torquay, Barnet, Burslem, Cardington, Cambridge, Wolverhampton, Bolton, Llandudno, Halifax, Bradford, Silloth, and Carlisle; on the 6th at Guernsey, Torquay, Salisbury, Bath, Barnet, Oxford, Burslem, Cardington, Cambridge, Wolverhampton, Bolton, Llandudno, Halifax, Stonyhurst, and Bradford; on the 7th at Guernsey, Plymouth, Torquay, Osborne, Salisbury, Bath, Barnet, Oxford, Cardington, Lowestoft, Cambridge, Wolverhampton, Bradford, and Silloth; on the 8th at Plymouth, Torquay, Bath, Oxford, Burslem, Lowestoft, Cambridge, Wolverhampton, Bolton, Halifax, Bradford, and Silloth; on the 9th at Guernsey, Halifax, and Bradford; on the 11th at Carlisle; on the 12th at Torquay, Bath, Oxford, Burslem, Wolverhampton, and Bolton; on the 13th at Bath, Barnet, Cambridge, Bolton, Llandudno, Halifax, Stonyhurst, and Bradford; on the 14th at Llandudno, and Bradford; on the 23rd at Burslem; on the 25th and 26th at Silloth; and on the 30th at Burslem, Bolton, and Halifax.

Hail fell in October on the 7th at Osborne; on the 21st at Truro; on the 22nd at Truro, Totnes, Lowestoft, and Bolton; on the 23rd at Guernsey, Truro, and Silloth; on the 24th at Truro, Torquay, Salisbury, Oxford, Royston, Lowestoft, and Cambridge; and on the 25th at Guernsey, Truro, and Torquay.

In November on the 3rd at Halifax; on the 6th at Totnes; on the 7th at Totnes, Strathfield Turgiss, Wolverhampton, and Silloth; on the 8th at Truro, Totnes, Burslem, Llandudno, and Silloth; on the 9th at Guernsey, Truro, Burslem, and Llandudno; on the 10th at Truro, Llandudno, and Halifax; on the 11th at Guernsey and Llandudno; on the 14th at Guernsey; on the 15th at Guernsey and Truro; on the 16th at Truro; on the 17th at Truro, Lowestoft, and Hull; on the 19th at Guernsey, Oxford, Bolton, Llandudno, Stonyhurst, and Carlisle; on the 20th at Guernsey; on the 24th at Burslem, Bolton, Halifax, and Carlisle; on the 25th at Bolton, Llandudno, and Carlisle; on the 26th at Halifax and Stonyhurst; on the 27th at Guernsey, Truro, Burslem, Wolverhampton, Llandudno, Stonyhurst, and Carlisle; on the 28th at Guernsey; and on the 29th at Guernsey, Truro, and Whitechurch.

MONTHLY METEOROLOGICAL TABLE FOR THE QUARTER ENDING DECEMBER 31st, 1882.

The Observations have been reduced to Mean values by Glaisher's Barometrical and Diurnal Range Tables, and the Hygrometrical results have been deduced from the sixth edition of his Hygrometrical Tables.

NAMES OF STATIONS AND OBSERVERS.	Height of Station Above Sea Level.	Month.	Pressure of Air in Month.		Temperature of Air in Month.				Mean Temperature.		Vapour.	Mean Reading of Thermometer.		Wind.				Mean Amount of Cloud.	Number of Days it fell.	Rain.

The highest temperatures of the air were at Cambridge, 71°·8; at Osborne, 71°·3; and at Llandudno, 71°·2.

The lowest temperatures of the air were at Marlborough, 11°·8; at Halifax, 13°; and at Bath, 13°·4°.

The greatest daily ranges of temperatures were at Salisbury, 15°·2; and at Whitechurch, Cardington, and Holkham, 12°·6.

The least daily ranges of temperatures were at Llandudno, 7°·7; at Guernsey, 7°·8; and at Ventnor and Bradford, 8°·4.

The greatest number of days of rain were at Guernsey, 85; at Truro, Bradford, and Totnes, 79.

The least number of days of rain were at Holkham, 48; at Barnet, 52; and at Cardington, Lancaster, and Carlisle, 55.

The greatest falls of rain in the quarter were at Barnstaple, 22·10 inches; at Guernsey, 21·65 inches; and at Totnes, 20·28 inches.

The least falls of rain in the quarter were at Barnet, 9·21 inches; at Leeds 9·60 inches; and at Cambridge, 9·70 inches.

QUARTERLY METEOROLOGICAL TABLE for different PARALLELS of LATITUDE.

PARALLELS OF LATITUDE, &c.		Mean Pressure of dry Air reduced to the level of the sea.										Mean of all Highest Read- ings of the Thermometer inset of the Lowest Read- ings of the Thermometer. Mean Range of Temper- ature in the Quarter.										Mean of all Highest.										Mean of all Lowest.										Mean Monthly Range of Temperature.										Mean Daily Range of Temperature.										Mean Temperature of the Air.										Mean Temperature of the Dew Point.										Mean Elastic Force of Vapour.										Mean Weight of Vapour in a cubic foot of Air.										Mean additional Weight required for saturation.										Mean degree of Humidity.												Mean Weight of a cubic foot of Air.												Mean Reading of Max- imum in Rays of Sun.												Mean Reading of Min- imum on Grass.												Mean Estimated Strength.												WIND.				Relative Pro- portion of				Mean Amount of Ozone.				Mean Amount of Cloud.				RAIN.
